**ZF8HP Series Transmissions: 8HP45 / 8HP55 / 8HP70 / 8HP90 - (Variation 845RE / 870RE)**

Applications: Audi Q5, Q7, A8 and A8L, BMW 1, 3, 5 and 7 series, Chrysler 300, Dodge Charger and Durango, Ram 1500, Jeep Grand Cherokee, Range Rover, Rolls-Royce and Bentley.

The ZF8HP transmission uses four single planetary gear sets to produce 8 forward speeds and reverse. These gear sets are connected to five clutch assemblies (shift elements). Two of which are multi-disc brake type clutch assemblies and three which are driving type multi-disc clutch assemblies. Reducing drag, these clutch assemblies are arranged in such a manner that three clutch assemblies need to be applied (closed) while two remain released (open) for each gear.

The valve body and solenoid are joined together with the electronic transmission control (ETCS) referred to as the Mechatronic Assembly. All of which is designed to transfer more torque to the wheels while simultaneously increasing efficiency.

**Fuel Economy Technologies for Light-Duty Vehicles** National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Fuel Economy of Light-Duty Vehicles, Phase 2, 2015-09-28 The light duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade cars and light duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features and will be more expensive to purchase relative to current vehicles. Though the gasoline powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030 the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation including autonomous vehicles will be well underway. What are these new technologies, how will they work, and will some technologies be more effective than others? Written to inform the United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits and implementation issues of fuel reduction technologies for next generation light duty vehicles. Cost Effectiveness and Deployment of Fuel Economy Technologies for Light Duty Vehicles estimates the cost, potential efficiency improvements and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
