Data Mining of NASA Boeing 737 Flight Data: Frequency Analysis of In-Flight Recorded Data Ansel J. Butterfield,2001 Data recorded during flights of the NASA Trailblazer Boeing 737 have been analyzed to ascertain the presence of aircraft structural responses from various excitations such as the engine aerodynamic effects wind gusts and control system operations The NASA Trailblazer Boeing 737 was chosen as a focus of the study because of a large quantity of its flight data records The goal of this study was to determine if any aircraft structural characteristics could be identified from flights data collected for measuring non structural phenomena A number of such data were examined for spatial and frequency correlation as a means of discovering hidden knowledge of the dynamic behavior of the aircraft Data recorded from on board dynamic sensors over a range of flight conditions showed consistently appearing frequencies Those frequencies were attributed to aircraft structural vibrations

Criminalization Sofia Michaelides-Mateou, Andreas Mateou, 2016-04-15 Two parallel investigations take place after every aviation accident one technical one judicial The former must be conducted with the sole intention of making safety recommendations to prevent the recurrence of similar accidents The judicial investigation however has the intention of identifying those parties that have been at fault and to apportion blameworthiness for criminal and civil liability

Consequently this results in a predicament for those parties that have been identified as having played a role in the accident a dilemma between not supplying information aimed at enhancing safety and preventing future accidents and on the other hand supplying such information which may possibly be used against them in subsequent criminal prosecution The situation is compounded by inconsistent approaches between different legal systems aviation professionals may find themselves faced with criminal charges in one country but not in another and they may also be unsure as to whether statements given during the technical investigation could be used against them in a court of law Aviation safety is to a large extent built upon the trust placed by pilots ATCOs and other aviation professionals in the process of accident investigation This book examines the growing trend to criminalize these same people following an accident investigation and considers the implications this has for aviation safety Study of the Engine Bird Ingestion Experience of the Boeing 737 Aircraft Peter W.
