2018 Joint Trauma System (JTS) Clinical Practice

Guidelines (CPGs) & DOD TRAUMA REGISTRY DATA DICTIONARY For Military and Civilian Health Care

Practitioners, 2018-10-09 Almost 1 000 total pages see index at beginning of publications for a complete list of included CPGs. Each CPG includes a section on the following: 1 GOAL, 2 BACKGROUND, 3 EVALUATION, 4 TREATMENT, 5 PERFORMANCE IMPROVEMENT, 6 PI MONITORING, 7 SYSTEM REPORTING. reduced burn morbidity and mortality near elimination of extremity compartment syndrome, better patient care documentation and improved communication across the spectrum of care between geographically dispersed facilities. CPGs are evidence based and developed with experts in the military and civilian communities, deployed clinicians, Service trauma surgical consultants, JTS leadership and formerly deployed Trauma Directors and Coordinators. JTS has a formalized process for developing, reviewing, updating and approving CPGs. The guidelines are developed and implemented by clinical subject matter experts in response to needs identified in the military area of responsibility. CPGs were developed originally for U.S. Central Command. However, collaborative efforts are ongoing with the other Combatant Commands to customize CPGs to their COCOMs. **INTRODUCTION TO THE JOINT TRAUMA SYSTEM** JTS The Joint Trauma System (JTS) is the Department of Defense (DoD) authority for the military's trauma care system. The vision of the Joint Trauma System is that every Soldier, Sailor, Marine and Airman injured on the battlefield will have the optimum chance for survival and maximum potential for functional recovery. To achieve this vision, in 2006 the JTS implemented programs for data driven trauma system development and improvement in addition to the collection of trauma data. As part of its data collection efforts, the JTS maintains a registry of trauma patients who received care at medical treatment facilities (MTFs). Since 2007, this registry, known as the DoD Trauma Registry (DoDTR), has documented demographic, injury, treatment and outcomes data for all trauma patients admitted to any DoD MTF, regardless of whether the injury occurred during on going military operations and is the largest military trauma data source in the world. Development of the

DoDTR began during the early years of the Global War on Terror GWoT when the need to systematically improve trauma care for combat wounded resulted in the impromptu creation of a demonstration registry known then as the Combat Trauma Registry CTR. The CTR was constructed by the Center for AMEDD Strategic Studies CASS trauma related information was initially abstracted into it from paper medical records received from trauma nurse coordinators TNCs at Landstuhl Regional Medical Center LRMC in Germany. Shortly after the demonstration program started the Army Surgeon General approved its transition to an operational mode leading to the formation of the Joint Theater Trauma System JTTS and eventually the Joint Trauma System JTS.
