[Entropy and Information Theory](#) Robert M. Gray,2013-03-14 This book is devoted to the theory of probabilistic information measures and their application to coding theorems for information sources and noisy channels The eventual goal is a general development of Shannon s mathematical theory of communication but much of the space is devoted to the tools and methods required to prove the Shannon coding theorems These tools form an area common to ergodic theory and information theory and comprise several quantitative notions of the information in random variables random processes and dynamical systems Examples are entropy mutual information conditional entropy conditional information and discrimination or relative entropy along with the limiting normalized versions of these quantities such as entropy rate and information rate Much of the book is concerned with their properties especially the long term asymptotic behavior of sample information and expected information This is the only up to date treatment of traditional information theory emphasizing ergodic theory

[Wireless Communications](#) Giorgio A. Vitetta,Desmond P. Taylor,Julio Colavolpe,Fabrizio Pancaldi,Philippa A. Martin,2013-03-29 This book introduces the theoretical elements at the basis of various classes of algorithms commonly employed in the physical layer and in part in MAC layer of wireless communications systems It focuses on single user systems so ignoring multiple access techniques Moreover emphasis is put on single input single output SISO systems although some relevant topics about multiple input multiple output MIMO systems are also illustrated Comprehensive wireless specific guide to algorithmic techniques Provides a detailed analysis of channel equalization and channel coding for

wireless applications Unique conceptual approach focusing in single user systems Covers algebraic decoding modulation techniques channel coding and channel equalisation     **Third Generation Wireless Systems: Post-Shannon signal architectures** George M. Calhoun,2003 This book is about the technological foundations of the next generation of wireless networks for the mobile Internet It places special emphasis on physical layer techniques and philosophies used in constructing interference resistant wireless signals A theoretical framework is developed around the idea of a post Shannon approach to designing communications systems viewing channel phenomena not as sources of degradation but as potential resources for additional information and signal robustness Calhoun has worked in the wireless industry since 1980
