An Introduction to Statistical Problem Solving in Geography J. Chapman McGrew, Jr., Charles B. Monroe, 2009-04-22

Written for undergraduate geography majors and entry level graduate students with limited backgrounds in statistical analysis and methods McGrew and Monroe provide a comprehensive and understandable introduction to statistical methods in a problem solving framework Engaging examples and problems are drawn from a variety of topical areas in both human and physical geography and are fully integrated into the text Without compromising statistical rigor or oversimplifying the authors stress the importance of written narratives that explain each statistical technique After introducing basic statistical concepts and terminology the authors focus on nonspatial and spatial descriptive statistics They transition to inferential problem solving including probability sampling and estimation before delving deeper into inferential statistics for geographic problem solving The final chapters examine the related techniques of correlation and regression A list of major goals and objectives is included at the end of each chapter allowing students to monitor their own progress and mastery of geographic statistical materials An epilogue offering over 150 geographic situations gives students a chance to figure out which statistical technique should be used for a particular situation

*An Introduction to Statistical Problem Solving in Geography* Arthur J. Lembo, Jr., J. Chapman McGrew, Jr., 2023-10-27 The fourth edition of *An Introduction to Statistical Problem Solving in Geography* continues its standing as the definitive introduction to statistics and quantitative analysis in geography

Assuming no reader background in statistics the authors lay out the proper role of statistical analysis and methods in human and physical geography They delve into the calculation of descriptive summaries and graphics to explain geographic patterns and use inferential statistics parametric and nonparametric to test for differences t tests ANOVA relationships regression and correlation and spatial statistics point and area patterns spatial autocorrelation This edition introduces more advanced topics including logistic regression two factor ANOVA and spatial estimation inverse distance weighting Kriging Many chapters also include thought provoking discussions of statistical concepts as they relate to the COVID 19 pandemic Maintaining an exploratory and investigative approach throughout the authors provide readers with real world geographic issues and more than 50 map examples Concepts are explained clearly and narratively without oversimplification Each chapter concludes with a list of major goals and objectives An epilogue offers over 150 open ended geographic situations inviting students to apply their new statistical skills to solve problems currently affecting our world

offering ample content for stimulating discussions      Statistics of Earth Science Data Graham J. Borradaile, 2013-11-11 The Goals of Data Collection and Its Statistical Treatment in the Earth Sciences The earth sciences are characterised by loose and complex relationships between variables and the necessity to understand the geographical distribution of observations as well as their frequency distribution Our frequency distributions and the looseness of relationships reflect the complexity and intrinsic natural variation in nature more than measurement error Furthermore earth scientists cannot design experiments according to statistical recommendation because the availability and complexity of data are beyond our control Usually the system we are studying cannot be isolated into discrete independent variables These factors influence the first steps of research how and where to collect specimens or observations Some issues are particularly troublesome and common in earth science but are rarely handled in an undergraduate statistics course These include spatial sampling methods orientation data regionalised variables time series identification of cyclicity and pattern discrimination multivariate systems lurking variables and constant sum data It is remarkable that most earth science students confront these issues without formal training or focused consideration      **Elementary Statistics for Geographers** James E. Burt, Gerald M. Barber, David L. Rigby, 2009-03-19 Introduces the techniques and concepts of statistics in human and physical geography This book explains not only how to apply quantitative tools but also why and how they work It helps students gain important skills for utilizing conventional and spatial statistics in their own research as well as for critically evaluating the work of others      *Indonesia's Small Entrepreneurs* Sarah Turner, 2013-12-19 In the context of Makassar on the eastern Indonesian island of Sulawesi the book explores the socioeconomic and cultural relationships that make life for small entrepreneurs in Makassar so distinctive Using a new framework for the study of small enterprises the small enterprise integrative framework this book gives us a greater understanding of the organization and operations of small enterprises in developing countries at both the micro and macro levels The application of this new framework for research reveals the diversity of labour flexibility networking and cluster styles amongst the enterprises studies and the constraints they face for growth Whilst the recent Southeast Asian economic crisis has been heralded by certain commentators as a new era for small enterprises in the region the book concludes that local realities for the small enterprises in Makassar mean that whilst for some it has been a time of shifting fortunes others have continued trading on the margins      Fundamentals of GIS 2nd Edition Update with Integrated Lab Manual Michael N.
