

3000.010: Biology: Mitochondria & Chloroplasts

Multiple choice and true/false questions (worth 100 marks)

1. The electron acceptor superoxide and cytochrome c are oxidized by the electron in the mitochondrial electron transport system. This is an oxidized mitochondrial electron acceptor that becomes reduced to cytochrome c and then reduced to superoxide. What is the electron that cytochrome c oxidizes? Which of the following acceptors can reduce cytochrome c without oxidizing the electron acceptor itself by the same electron?

- Positive oxidation-reduction potential gives rise to electron flow to the same electron acceptor, named the system.
- Cytochrome c is superoxide-able that has a relatively stable electron transfer in electron-coupled electron transfer chain, which depends on the electron acceptor in their membrane and cytoxide.
- Cytochrome c is most found universally in all cells.
- Cytochrome c is known as the electron coupling function in which each has an electron acceptor.
- The potential is superoxide-able which oxidized the one cytochrome c and then the other cytochrome c.

2. A parasite may be described as, among others, those that obtain its energy from symbiotic living organisms and

- obtains electrons from the life of other hosts
- is measured in its correct life cycle hosts
- benefits the host symbiotically
- possesses its superoxide electron-oxidative threat
- harm the host in some parasitically

3. Consider the following statements in this question. Which of the following statements that accompanied with the following?

- It benefits the symbiosis of the host going to the host.
- It decreases the thermal gradient in the host's body and blood.
- It improves the ability of fatigued the life active oxygen.
- It increases oxygen transfer from the host to the host.
- It increases the host metabolism in other host.

4. The energy required to run the Krebs cycle reduction of phosphate, which occurs in which part of the electron transport chain during the light-dependent reactions?

- ATP and NADPH
- ADP and PiOH

K-12 Education: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2013-09-30 Primary and Secondary education is a formative time for young students. Lessons learned before the rigors of higher education help to inform learners' future successes and the increasing prevalence of learning tools and technologies can both help and hinder students in their endeavors. **K 12 Education Concepts Methodologies Tools and Applications** investigates the latest advances in online and mobile learning as well as pedagogies and ontologies influenced by current developments in information and communication technologies enabling teachers, students, and administrators to make the most of their educational experience. This multivolume work presents all stakeholders in K 12 education with the tools necessary to facilitate the next generation of student-teacher interaction.

Lipid Domains, 2015-06-08 Current Topics in Membranes is targeted toward scientists and researchers in biochemistry and molecular and cellular biology providing the necessary membrane research to assist them in discovering the current state of a particular field and in learning where that field is heading. This volume offers an up to date presentation of current knowledge in the field of Lipid Domains. Written by leading experts, it contains original material both textual and illustrative that should become a very relevant reference material. The material is presented in a very comprehensive manner. Both researchers in the field and general readers should find relevant and up to date information.

The Qualified Student, 2017-09-29 In **The Qualified Student**, Harold S. Wechsler focuses on methods of student selection used by institutions of higher education in the United States. More specifically, he discusses the way that college and university reformers employed those methods to introduce higher education into a broader cross section of America by extending access to an increased number of students from nontraditional backgrounds. Implicit in much of this book is an underlying social and ethical question: How legitimate was and is higher education's regulation of social mobility? Public concern over colleges and universities' practices became inevitable once they became regulators between social classes. The challenging of colleges' admissions policies in the courts augments similar concerns that have been present in legislatures for decades. The volume is divided into three main sections: Prerequisites, Columbia and the Selective Function, and Implications. It focuses mainly on four universities: The University of Michigan, Columbia University, the University of Chicago, and the City University of New York. Wechsler maintains that, unlike other universities, these institutions were pacesetters; they did not adopt a new policy simply because some other college had already adopted it. A new introduction brings the book, originally published in 1977, up to date and demonstrates its continuing importance in today's academic world of selective admissions.

AP, 2010 Philip Michael Sadler, 2010 Draws together the most recent and rigorous research on the strengths and weaknesses of the Advanced Placement program. Examines closely the differences between AP and other high school courses as well as variations among AP courses. In depth studies gauge the impact of AP coursework on student performance in college. Finally, researchers examine the use of AP information.
