Electronic Assistive Technology EAT is a subset of a wider range of products and services known as Assistive Technology AT. AT is designed to support and enable people with disabilities either acquired or congenital to participate in activities with greater independence and safety. With a global aging population it has an important role to play in enabling and supporting those with disability and their carers. Handbook of Electronic Assistive Technology discusses a range of commonly available or emerging electronic assistive technologies. It provides historical background advice when assessing for these devices and references different models of provision. It includes both medical and engineering aspects of provision. It is anticipated that the book will support students, trainees and newly qualified Assistive Technology Practitioners to develop their understanding of the field by considering the variables that could potentially influence the decision making process when assessing for and providing this equipment. It also provides a reference point for those already practicing in this field and offers coverage of a broader range of technologies than clinicians may be exposed to in their daily work. This is the first reference book to focus on a comprehensive set of electronic assistive technologies and discuss their clinical application. Provides comprehensive coverage of electronic assistive devices. Gives an overview of physical and cognitive pathologies and approaches for utilizing electronic assistive devices for individuals affected by these pathologies. Covers essentials for assistive technology practitioners, human factors and technologies **The Ultimate Online Customer Service Guide** Marsha
