Digital Trademarks and Brands Rajeev Sachdev, 2025-10-28 Trademark disputes are a consistent feature of the digital legal landscape appearing in connection with a range of successive technologies and platforms. This book presents a new adapted model for digital trademarks and trade practices providing recommendations for the Uniform Domain Name Dispute Resolution Policy (UDRP) and extending a like process to platform trademark policies and complaint procedures including e-commerce, marketplace, search advertising, social media, mobile applications and Metaverse platforms. The proposed model addresses and greatly reduces legal uncertainties and the harm caused by problems for digital trademarks in such key areas as the following: use and place of use of marks, bad faith and abuse, confusion, unfair acts, trade practices or competition terms, policies and disclaimers, jurisdiction, territory and justification. The adapted model is informed by pertinent theories and concepts, select aspects of EU and US and other legal frameworks and existing policies. Ultimately, a uniform policy is recommended for each of the five platform types in line with an adapted version of the UDRP based on recommendations through the model. It is applied in a way that provides a comprehensive, workable solution fostering legal certainty. Actual text for the proposed adapted UDRP as well as the uniform policies recommended for each type of platform is provided with guidance for implementation. The book provides recommendations that can greatly enhance the resolution of trademark disputes of various kinds and on various platforms in a more certain, cost effective and timely manner. Given that the complex global environment of digital trademarks raises new issues not adequately addressed by legal frameworks, this book will be of inestimable value to digital platforms, e-commerce, search advertising, social media, mobile app, Metaverse, etc., website operators, platform and website lawyers, various stakeholders in the UDRP, arbitrators, panellists, online dispute resolution providers, libraries, academics and researchers. It will also be useful to digital businesses, domain name holders, sellers, listers, advertisers, content providers, digital consumers, trademark holders, digital trademark users and others.

Mobile OS Battle Zuri Deepwater, AI, 2025-02-25 Mobile OS Battle explores the strategic rivalry between iOS and Android revealing how these platforms have revolutionized mobile technology and business models. The book dissects their contrasting philosophies: Apple's iOS with its controlled vertically integrated approach and Google's Android known for its open source horizontally integrated system. Understanding these differences is crucial as they impact user experience, developer engagement and overall market reach. The book examines the developer ecosystems each platform fosters and their distinct business models including app store revenues and advertising. By tracing the historical evolution of mobile operating systems from early pioneers like Symbian the book contextualizes the current duopoly. This provides readers with insights into how strategic decisions have shaped the mobile landscape and where it might be headed offering valuable perspectives for business management and technology professionals. The book progresses by first introducing the fundamental architectures of iOS and Android then analyzes the developer ecosystems and business models concluding with practical insights into the future of mobile technology. The insights provided are drawn from industry reports, technical specifications, financial statements and case studies. This approach allows the reader to understand the competitive dynamics and investment opportunities in the mobile sector while considering ongoing debates like data privacy.

Device Neutrality
Jan Krämer, Richard Feasey, 2021-06-08 Since the net neutrality debate began in the early 2000s the internet ecosystem has evolved and European policymakers now face a different type of gatekeeper. This CERRE Tech Media Telecom report identifies the main competitive bottlenecks and discusses whether the key pillars of net neutrality regulation openness, non-discrimination and transparency should also apply to certain types of devices such as smartphones and laptops. Assuming that smartphones are likely to be the first choice for consumers accessing the internet and that they are therefore a crucial element of the internet access value chain the authors of the CERRE report make concrete suggestions focusing on operating systems, app stores and browsers. Crucially the policy objective should be to enable consumers to bypass gatekeepers and access content via multiple channels but not neutrality in the narrow sense said Jan Krämer co-author of the report and CERRE Academic Co-Director. Non-neutral conduct is important for innovation, investment, security and privacy. In light of existing EU regulation specifically the Platform to Business (P2B) Regulation and the Digital Markets (DMA) and Digital Services (DSA) Acts the report makes a number of recommendations aiming to ensure openness, non-discrimination and transparency when accessing the internet on mobile devices. More accessible and less discriminatory app stores As they represent a gateway for consumers to access other content and apps the authors Jan Krämer and Richard Feasey make several policy recommendations for app stores that aim to strike a balance between mitigating the competitive gatekeeper advantage and maintaining the user convenience offered by pre-installed apps. These include Enabling alternative app stores to be easily installed on devices including by requiring the pre-installed app stores to host rival app stores with independent payment systems. Unbundling the dominant app store from other apps. Banning self-preferencing of apps in app stores or

browsers Careful consideration of how the transparency and redress mechanisms for dominant app stores under P2B DMA and DSA obligations may interact when imposed concurrently In important areas including app stores and browsers our recommendations build upon but go further than the obligations under the P2B regulation and the foreseen obligations under the DMA and DSA Richard Feasey co author of the report and CERRE Senior Advisor Openness transparency and data portability for operating systems As third parties may face discriminatory access to operating system OS functionality or system resources as well as limited browser functionality on an OS CERRE makes four main suggestions to improve competition and choice Enabling side loading of apps in dominant operating systems such that consumers can install any lawful and safe app on their device More stringent user consent rules for pre installed apps to align them with the consent required for apps that are installed later the same access privileges for both pre installed and alternative apps and the possibility to truly de install pre installed apps Transparency obligations on interfaces APIs for third party app developer access to operating systems and minimum notice periods in case those interfaces are changed The right to data portability as well as codes of conduct and common interfaces for devices so that consumers can switch from one device operating system to another as smoothly as possible By intervening at the operating system and app discovery layer to ensure access to alternative content the Commission can foster fairer competition in the internet access value chain without hindering innovation investment and the European principles of consumer safety and security Jan Krmer The report was presented and debated on Tuesday 8 June 14 00 CEST during the CERRE public webinar Device neutrality regulating mobile devices
