Burnette, 2021-05-31 This book describes an adaptable biothreat assessment process to complement overall biorisk management programs incorporating threat management and the unique natures of biological assets Further this book examines the nexus between public health international security and developing technologies building a case for augmenting biosecurity to levels beyond the laboratory constraints With the face of biological and biomedical sciences changing this book describes how with proper biosecurity development these can become assets rather than liabilities to secure our world from natural and man made biological disasters The world is changing rapidly with respect to developing threats such as terrorism and dual use technologies such as synthetic biology that are challenging how we think about biosafety and biosecurity Further the fields of public health and international security are colliding as both of these share the common enemy intentional or natural biological incidents To date biosecurity

has been limited to laboratory level application and complicating efforts and lacks credentialed biosecurity professionals skilled in both the biological sciences and threat management techniques The result is a fragmented field of practice with tremendous need from the lab to the outbreak Underpinning these principles is the SARS CoV 2 coronavirus pandemic providing a historic milestone to examine biosecurity through a global lens This book describes biosecurity as a set of practices and principles to be augmented out of the constrained laboratory environment and applied to larger efforts such as international threat reduction and biological incident management **Bioprocess Engineering** Shijie Liu,2020-04-07
