Essentials of Digital Signal Processing B. P. Lathi, Roger A. Green, 2014-04-28 This textbook offers a fresh approach to digital signal processing DSP that combines heuristic reasoning and physical appreciation with sound mathematical methods to illuminate DSP concepts and practices It uses metaphors analogies and creative explanations along with examples and exercises to provide deep and intuitive insights into DSP concepts Practical DSP requires hybrid systems including both discrete and continuous time components This book follows a holistic approach and presents discrete time processing as a seamless continuation of continuous time signals and systems beginning with a review of continuous time signals and systems frequency response and filtering The synergistic combination of continuous time and discrete time perspectives leads to a deeper appreciation and understanding of DSP concepts and practices For upper level undergraduates Illustrates concepts with 500 high quality figures more than 170 fully worked examples and hundreds of end of chapter problems more than 150 drill exercises including complete and detailed solutions Seamlessly integrates MATLAB

throughout the text to enhance learning

Discrete-Time Signals and Systems Oktay Alkin, 2025-03-27 Drawing on author's 30 years of teaching experience *Discrete Time Signals and Systems A MATLAB Integrated Approach* represents a novel and comprehensive approach to understanding signals and systems theory Many textbooks use MATLAB as a computational tool but Alkin's text employs MATLAB both computationally and pedagogically to provide interactive visual reinforcement of fundamental concepts important in the study of discrete time signals and systems In addition to 204 traditional end of chapter problems and 160 solved examples the book includes hands on MATLAB modules consisting of 108 MATLAB based homework problems and projects coordinated with the traditional end of chapter problems 44 live scripts and GUI based interactive apps that animate key figures and bring core concepts to life Downloadable MATLAB code for most of the solved examples 92 fully detailed MATLAB exercises that involve step by step development of code to simulate the relevant signal and or system being discussed including some case studies on topics such as real time audio processing synthesizers electrocardiograms sunspot numbers etc The ebook version includes clickable links that allow running MATLAB code associated with solved examples and exercises in a browser using the online version of MATLAB It also includes audio and video files for some of the examples Each module or application is linked to a specific segment of the text to ensure seamless integration between learning and doing The aim is to not simply give the student just another toolbox of MATLAB functions but to use the development of MATLAB code as part of the learning process or as a litmus test of students understanding of the key concepts All relevant MATLAB code is freely available from the publisher In addition a solutions manual figures presentation slides and other ancillary materials are available for instructors with qualifying course adoption
