**Boeing 737** Graham M. Simons,2021-03-15 An in depth history of the controversial airplane from its design development and service to politics power struggles and more The Boeing 737 is an American short to medium range twinjet narrow body airliner developed and manufactured by Boeing Commercial Airplanes a division of the Boeing Company Originally designed as a shorter lower cost twin engine airliner derived from the 707 and 727 the 737 has grown into a family of passenger models with capacities from 85 to 215 passengers the most recent version of which the 737 MAX has become embroiled in a worldwide controversy Initially envisioned in 1964 the first 737 100 made its first flight in April 1967 and entered airline service in February 1968 with Lufthansa The 737 series went on to become one of the highest selling commercial jetliners in history and has been in production in its core form since 1967 the 10 000th example was rolled out on 13 March 2018 There is however a very different side to the convoluted story of the 737 s development one that demonstrates a transition of power from a primarily engineering structure to one of accountancy number driven powerbase that saw corners cut and the previous extremely high safety methodology compromised The result was the 737 MAX Having entered service in 2017 this model was grounded worldwide in March 2019 following two devastating crashes In this revealing insight into the Boeing 737 the renowned aviation historian Graham M Simons examines its design development and service over the decades since 1967 He also explores the darker side of the 737 s history laying bare the politics power struggles changes of management ideology and battles with Airbus that culminated in the 737 MAX debacle that has threatened Boeing s very survival

Jones,1985 **An Error-dependent Model of Instrument-scanning Behavior in Commercial Airline Pilots** D. H. Jones,1985 A new flexible model of pilot instrument scanning behavior is presented which assumes that the pilot uses a set of deterministic scanning patterns on the pilot s perception of error in the state of the aircraft and the pilot s knowledge of the interactive nature of the aircraft s systems Statistical analyses revealed that a three stage Markov process composed of the pilot s three predicted lookpoints LP occurring 1 30 2 30 and 3 30 of a second prior to each LP accurately modelled the scanning behavior of 14 commercial airline pilots while flying steep turn maneuvers in a Boeing 737 flight simulator The modelled scanning data for each pilot were not statistically different from the observed scanning data in comparisons of mean dwell time entropy and entropy rate These findings represent the first direct evidence that pilots are using deterministic scanning patterns during instrument flight The results are interpreted as direct support for the error dependent model and suggestions are made for further research that could allow for identification of the specific scanning patterns suggested by the model **Aircraft & Aerospace Asia-Pacific** ,2004 **NASA Contractor Report** ,1985 *Boeing 737 Pilot Training Manual* Eastern Provincial Airways Limited.
