Ecological Sustainability and Integrity: Concepts and Approaches J. Lemons, L. Westra, Robert Goodland, 1997-12-31 This book follows upon earlier work which culminated in the publication of two recent books *Sustainable Development Science Ethics and Public Policy* John Lemons and Donald A Brown editors and *Perspectives on Ecological Integrity* Laura Westra and John Lemons editors Both of these books also were published by Kluwer Academic Publishers In this book we seek to explore more fully the concepts of sustainability and ecological integrity as well as the connections between them We have divided chapters into three groups In the first the concept of sustainability in relation to science law and ethics is explored In the second concepts of sustainability and ecological integrity are applied to problems in specific natural resources Finally in the third group we examine possible approaches to public policy which might include concepts of sustainability and ecological integrity Overall we believe that this collection presents a wide variety of perspectives discussions and case studies John Lemons Laura Westra Robert Goodland Editors ix CONTENTS PART I Sustainability in Relation to Science Law and Ethics Chapter 1 The Concept of Sustainability A Critical Approach Lynton K Caldwell 1 Problems of Definition 2 2 Behavioral Obstacles 4 3 Psychological Obstacles Seven Deadly Sins of Unsustainability 8 4 **A Systems Approach to the**

Environmental Analysis of Pollution Minimization Sven E. Jorgensen, 2020-01-29 The environmental analysis of pollution problems always involves the use of mass and energy balances to quantify the extent of pollution and its sources This same form of analysis can be applied to ecosystems production systems a whole country or a region A Systems Approach to the Environmental Analysis of Pollution Minimization identifies and describes the common factors shared by these systems The book is organized in twelve chapters and progresses from general concepts to specific assessment methods Chapter one is a general introduction to environmental management principles Chapter two discusses conservation principles and their applications to environmental health Chapters three and four explore ecosystem health properties and analysis Chapters five through eleven present different methods of analysis including Green Accounting Clean Technology Life Cycle Analysis and Risk Assessment Editor Sven Jorgensen closes the book with a sweeping summary Jorgensen is a internationally published authority on the use and analysis of ecosystem models His new book is a comprehensive guide for both students and professionals A Systems Approach to the Environmental Analysis of Pollution Minimization is an invaluable contribution Features Ontology and Closeness in Human-Nature Relationships Neil H. Kessler, 2018-10-10 In *Ontology and Closeness in Human Nature Relationships* Neil H Kessler identifies the preconceptions which can keep the modern human mind in the dark about what is happening relationally between humans and the more than human world He has written an accessible work of environmental philosophy with a focus on the ontology of human nature relationships In it he contends that large scale environmental problems are intimate and relational in origin He also challenges the deeply embedded modernist assumptions about the relational limitations of more than human beings ones which place erroneous limitations on the

possibilities for human more than human closeness Diverging from the posthumanist literature and its frequent reliance on new materialist ontology the arguments in the book attempt to sweep away what ecofeminists call human nature dualisms In doing so conceptual avenues open up that have the power to radically alter how we engage in our daily interactions with the more than human world all around us Given the diversity of fields and disciplines focused on the human nature relationship the topics of this book vary quite broadly but always converge at the nexus of what is possible between humans and more than human beings The discussion interweaves the influence of human nature dualisms with the limitations of Deleuzian becoming and posthumanism s new materialism and agential realism It leverages interhuman interdependence theory Charles Peirce s synechism of feeling and various treatments of Theory of Mind while exploring the influence of human nature dualisms on sustainability place attachment common worlds pedagogy emergence and critical animal studies It also explores the implications of plant electrical activity plant intelligence and plant neurobiology for possibilities of relational capacities in plants while even grappling with theories of animism to challenge the animate inanimate divide The result is an engaging novel treatment of human nature relational ontology that will encourage the reader to look at the world in a whole new way
