International Conference on Remote Sensing for Marine and Coastal Environments**, 1997 **Tropical Freshwater Wetlands** H. Roggeri, 2013-03-09 Wetlands could be described as land and water at Tropical wetlands one and the same time and as such are very specific on the brink ecosystems. Their often rich variety of resources makes them highly valuable to the peoples who live With a few exceptions like the Everglades in the United States the last remaining large wetlands are to be found in

developing countries. Perhaps this can be explained by insufficient financial resources frequently associate wetlands with such nuisances and calamities as mosquitos, disease, floods, impeded lower population density or a different concept of valuable wastelands etc. As a result, these areas are development and well-being. Whatever the reasons often perceived as obstacles to human development, many tropical wetlands still exist and support the well-being subsistence of many communities. But for how much History reflects these two views, Wetlands may longer have been the cradle of great civilizations like the. During the last few decades, tropical wetlands Maya, Inca, Aztec, Nilot, and Mesopotamian have also been destroyed or considerably altered. Dams and embankments now prevent water from civilizations but elsewhere their destruction allowed other societies to develop. For example, the Nether spreading into the floodplains of several rivers like lands literally emerged from the waters thanks to the Senegal, Volta and Nile.

Classification and Inventory of the World's Wetlands C.M. Finlayson, Arnold van der Valk, 2012-12-06. This book brings together for the first time information on various wetland classification systems and wetland inventories from around the world, outlining regional, national and local wetland classifications developed in Africa, Australia, Canada, China, Europe, India, South America and the USA. Oriented towards the conservation and management of wetlands, these existing national and regional classification systems have been useful in providing an essential base for the development of an international system. The volume also reviews various attempts at drawing up an inventory of wetlands in different parts of the world, ranging from field and literature surveys to highly sophisticated efforts using aerial photography and satellite imaging.

Audience: Workers in wetland ecology, especially those working on classification, inventory, conservation or management of wetlands at the local, national, regional or international levels.

Technical Papers, 1995 Wetlands Raymundo E. Russo, 2008. Wetlands are lands where saturation with water is the dominant factor determining the nature of soil development and the types of plant and animal communities living in the soil and on its surface. Wetlands vary widely because of regional and local differences in soils, topography, climate, hydrology, water chemistry, vegetation and other factors including human disturbance. Indeed, wetlands are found from the tundra to the tropics and on every continent except Antarctica. This book brings together the latest research in field.
