Applications Of Physiological Ecology To Forest Management:

Applications of Physiological Ecology to Forest Management J. J. Landsberg,S. T. Gower,1997-01-08 Forest management is a complex process that now incorporates information obtained from many sources It is increasingly obvious that the physiological status of the trees in a forest has a dramatic impact on the likely success of any particular management strategy Indeed models described in this book that deal with forest productivity and sustainability require physiological information This information can only be obtained from an understanding of the basic biological mechanisms and processes that contribute to individual tree growth This valuable book illustrates that physiological ecology is a fundamental element of proficient forest management Provides essential information relevant to the continuing debate over sustainable forest management Outlines how modern tools for physiological ecology can be used in planning and managing forest ecosystems Reviews the most commonly used forest models and assesses their value and future

Godbold,Elve Lode,Viliam Pichler,Patrick Schleppi,2010-10-25 The protective function of forests for water quality and water related hazards as well as adequate water supplies for forest ecosystems in Europe are potentially at risk due to changing climate and changing land management practices Water budgets of forest ecosystems are heavily dependent on climate and forest structure The latter is determined by the management measures applied in the forestry sector Various developments of forest management strategies imposed on a background of changing climate are considered in assessing the overall future of forest water interactions in Europe Synthesizing recent research on the interactions of forest management and the water regime of forests in Europe and beyond the book makes an important contribution to the ongoing dialogue between scientists dealing with different scales of forest water interactions This collaborative endeavour which covers geographic and climatic gradients from Iceland to Israel and from southern Spain to Estonia and Finland was made possible through the COST Action Forest Management and the Water

Forest Science ,2015 Tropical Forests: Management and Ecology Ariel E. Lugo,Carol Lowe,1995-06-29 Forestry professors used to remind students that whereas physicians bury their mistakes foresters die before theirs are noticed But good institutions live longer than the scientists who contribute to building them and the half century of work of the USDA Forest Service's Institute of Tropical Forestry ITF is in plain view an unprecedented corpus of accomplishments that would instill pride in any organization There is scarcely anyone interested in current issues of tropical forestry who would not benefit from a refresher course in ITF's findings its early collaboration with farmers to establish plantations its successes in what we now call social forestry its continuous improvement of nursery practices its screening trials of native species its development of wood processing technologies appropriate for developing countries its thorough analysis of tropical forest function and its holistic approach toward conservation of endangered species Fortunately ITF has a long history of information exchange through teaching like many others I got my own start in tropical forest ecology from just such a course in Puerto Rico And long before politicians recognized the global importance of tropical forestry the ITF staff served actively as ambassadors of the discipline visiting tropical countries everywhere to learn and when invited to do so to help solve local problems It is a general principle of biogeography that species turnover rates on islands are higher than those on continents Inevitably the same is true of scientists assigned to work on islands
