The reader will learn to analyze physical evidence, understand what it means and how to incorporate math and physics into an investigation. Topics featured in this book include Case studies utilizing event data recorder data, Photogrammetry analysis, Determining motorcycle speed at the time of an accident. The book provides a unique roadmap for the motorcycle accident reconstructionist user. It is written by two specialists in this field who provide analyses of physical factors that affect motorcycle visibility, motorcycle usage at night and human factors in motorcycle crashes to the greater understanding of crash analysts, consultants and safety engineers alike.

The book provides a fundamental background in forensic science, criminal investigation and court testimony. It describes how various forms of evidence are collected, preserved and analyzed scientifically and then presented in court based on the analysis of the forensic expert. The book addresses knowledge of the natural and physical sciences including biology and chemistry while introducing readers to the application of science to the justice system. New topics added to this edition include coverage of the formation and work of the NIST Organization of Scientific Area Committees (OSACs), new sections on forensic palynology, pollen, forensic taphonomy, the opioid crisis, forensic genetics and genealogy, recent COVID 19 fraud schemes perpetrated by cybercriminals and a wholly new chapter on forensic psychology. Each chapter presents a set of learning objectives, a mini glossary and acronyms. While chapter topics and coverage flow logically, each chapter can stand on its own allowing for continuous or selected classroom reading and study. *Forensic Science* Fourth Edition is an ideal introductory textbook to present forensic science principles and practices to students including those with a basic science background without requiring prior forensic science coursework.
