Stock, Mark W. Watson, 1994 An experiment is performed to assess the prevalence of instability in univariate and bivariate macroeconomic time series relations and to ascertain whether various adaptive forecasting techniques successfully handle any such instability Formal tests for instability and out of sample forecasts from sixteen different models are computed using a sample of 76 representative U.S. monthly postwar macroeconomic time series constituting 5700 bivariate forecasting relations The tests indicate widespread instability in univariate and bivariate autoregressive models However adaptive forecasting models in particular time varying parameter models have limited success in exploiting this instability to improve upon fixed parameter or recursive autoregressive forecasts *Asymptotically Median Unbiased Estimation of Coefficient Variance in a Time Varying Parameter Model* James H.
