Iteration Theory:

Iteration Theory and its Functional Equations Roman Liedl,Ludwig Reich,György Targonski,2006-11-14 *Iteration Theory - Proceedings Of The European Conference* W Forg-rob,Norbert Netzer,Christian Mira,Gyoergy Targonski,Detlef Gronau,1996-07-03 Iteration theory has its roots in the operation of substituting functions into itself This has led to questions like that of the behaviour of functions by repeating this substitution and when the number of iterations tends to infinity The terms orbit and chaos appropriately describe this behaviour Dynamical systems and the theory of functional equations play important roles in this field *Topics in Iteration Theory* György I. Targonski,1981 **Iteration Theories** Stephen L. Bloom,Zoltan Esik,2012-12-06 This monograph contains the results of our joint research over the last ten years on the logic of the fixed point operation The intended au dience consists of graduate students and research scientists interested in mathematical treatments of semantics We assume the reader has a good mathematical background although we provide some prelimi nary facts in Chapter 1 Written both for graduate students and research scientists in theoret ical computer science and mathematics the book provides a detailed investigation of the properties of the fixed point or iteration operation Iteration plays a fundamental role in the theory of computation for example in the theory of automata in formal language theory in the study of formal power series in the semantics of flowchart algorithms and programming languages and in circular data type definitions It is shown that in all structures that have been used as semantical models the equational properties of the fixed point operation are cap tured by the axioms describing iteration theories These structures include ordered algebras partial functions relations finitary and in finitary regular languages trees synchronization trees 2 categories and others Iteration Theory and Its Functional Equations Roman Liedl,Ludwig Reich,Gyorgy Targonski,2014-01-15

Iteration Theory (ECIT '06) Gian Luigi Forti,2007 **Index Theory for Symplectic Paths with Applications** Yiming Long,2012-12-06 This book is based upon my monograph Index Theory for Hamiltonian Systems with Applications published in 1993 in Chinese and my notes for lectures and courses given at Nankai University Brigham Young University ICTP Trieste and the Institute of Mathematics of Academia Sinica during the last ten years The aim of this book is twofold 1 to give an introduction to the index theory for symplectic matrix paths and its iteration theory which form a basis for the Morse theoretical study on Hamilto nian systems and to give applications of this theory to periodic boundary value problems of nonlinear Hamiltonian systems Here the iteration theory means the index theory of iterations of periodic solutions and symplectic matrix paths 2 to serve as a reference book on these topics There are many different ways to introduce the index theory for symplectic paths in order to establish Morse type index theory of Hamiltonian systems In this book I have chosen a relatively elementary way i e the homotopy classification method of symplectic matrix paths It depends only on linear algebra point set topology and certain basic parts of linear functional analysis I have tried to make this part of the book self contained and at the same time include all of the major results on these topics so that researchers and students interested in them can

read it without substantial difficulties and can learn the main results in this area for their possible applications **New Directions and Open Problems in Iteration Theory** György I. Targonski,1984 **Iteration Theory (Ecit 91) - Proceedings Of The European Conference** J P Lampreia,Jaume Llibre,Christian Mira,Gyoergy Targonski,Jose Sousa Ramos,1992-12-18 The main theme of the ECIT conferences is Iteration Theory on the borderline between Dynamics and Functional Equations The aim is to foster symbiosis between mainstream dynamics and iteration theory treated in the style of functional equations theory The following topics are focused turbulence and iteration characterization of chaos kneading theory symbolic dynamics bifurcation periods of maps topological dynamics discrete retarded dynamical systems cellular automata as dynamical systems iterative roots of formal power series iterative roots of polynomials phantom iterative roots iterative groups and semigroups families of commuting functions algebraic aspects of iteration theory and functional equations **Iteration Theory (ECIT '08)** Aleksandr N. Šarkovskij,2009 **Iteration Theory and Its Functional Equations** Roman Liedl,Ludwig Reich,György I. Targonski,1985 20th European Conference on Iteration Theory Witold Jarczyk,Francisco Balibrea,Laura Gardini,2016 **The Theory and Applications of Iteration Methods** Ioannis K. Argyros,Ferenc Szidarovszky,2018-05-04 The Theory and Applications of Iteration Methods focuses on an abstract iteration scheme that consists of the recursive application of a point to set mapping Each chapter presents new theoretical results and important applications in engineering dynamic economic systems and input output systems At the end of each chapter case studies and numerical examples are presented from different fields of engineering and economics Following an outline of general iteration schemes the authors extend the discrete time scale Liapunov theory to time dependent higher order nonlinear difference equations The monotone convergence to the solution is examined in and comparison theorems are proven Results generalize well known classical theorems such as the contraction mapping principle the lemma of Kantorovich the famous Gronwall lemma and the stability theorem of Uzawa The book explores conditions for the convergence of special single and two step methods such as Newton s method modified Newton s method and Newton like methods generated by point to point mappings in a Banach space setting Conditions are examined for monotone convergence of Newton s methods and their variants Students and professionals in engineering the physical sciences mathematics and economics will benefit from the book s detailed examples step by step explanations and effective organization **TAPSOFT '91: Proceedings of the International Joint Conference on Theory and Practice of Software Development, Brighton, UK, April 8-12, 1991** S. Maibaum,1991-03-28 TAPSOFT 91 is the Fourth International Joint Conference on Theory and Practice of Software Development It was held in Brighton April 8 12 1991 and was organized by the Department of Computing Imperial College London The proceedings of TAPSOFT 91 are organized into three parts Colloquium on Trees in Algebra and Programming CAAP Advances in Distributed Computing ADC Colloquium on Combining Paradigms for Software Development CCPSD The first part CAAP is contained in Vol 1 the other two parts constitute Vol 2

CAAP 91 focuses on the following topics Logical algebraic and combinatorial properties of discrete structures strings trees graphs etc including the theory of formal languages considered in the broad sense as that of sets of discrete structures and the theory of rewriting systems over them Application of discrete structures in computer science syntax and semantics of programming languages operational semantics logic programming algorithms and data structures complexity of algorithms and implementation aspects proof techniques for nonnumerical algorithms formal specifications and visualization of structured objects The ADC talks by distinguished invited speakers survey current developments in distributed computing including the integration of different paradigms for concurrency algebraic logical and operational foundations and applications to software engineering and formal methods The CCPSD papers address aspects of the trend in software engineering towards unification and synthesis combining theory and practice and merging hitherto diverse approaches
