Information Modeling in Pedagogy and Practice Anne K. Anderson, Kevin R. Miller, David E. Gunderson, 2025-08-11 The adoption of building information modeling BIM in both pedagogy and practice has experienced significant growth in the past decade. As the use of BIM is being quantitatively and qualitatively shown to improve project outcomes, many educators and practitioners are still struggling with how to incorporate BIM into curriculum training and current and future projects. This book is a compilation of the best academic and research articles on the topic of BIM, providing a resource for both educators and practitioners for understanding issues regarding BIM. It covers BIM topics such as BIM Execution Planning, Collaboration Visualization, Site Utilization Planning, Safety Estimating, Sequencing, Coordination Clash Detection, Integrated Project Delivery, Legal considerations for BIM, Industry Uses of BIM, Sustainability, Facilities Management, Interoperability, Modular Construction, and Virtual Reality. It includes a new introduction and conclusion. *Building Information Modeling in Pedagogy and Practice* will be an invaluable resource for engaged academics and teaching practitioners interested in playing a key role in the future development of the building profession as well as undergraduate and postgraduate students wishing to understand the importance of BIM. Most of the chapters in this book were originally published in the International Journal of Construction Education and Research.

BIM in Principle and in Practice Peter Barnes, Nigel J. Davies, 2015 **Building Information Modeling** André Borrman, Markus König, Christian Koch, Jakob Beetz, 2018-09-19 **Building Information Modeling** BIM refers to the consistent and continuous use of digital information throughout the entire lifecycle of a built facility, including its design, construction, and operation. In order to exploit BIM methods to their full potential, a fundamental grasp of their key principles and applications is essential. Accordingly, this book combines discussions of theoretical foundations with reports from the industry on currently applied best practices. The book's content is divided into six parts. Part I discusses the technological basics of BIM and addresses computational methods for the geometric and semantic modeling of buildings as well as methods for process modeling. Next, Part II covers the important aspect of the interoperability of BIM software products and describes in detail the standardized data format Industry Foundation Classes. It presents the different classification systems, discusses the data format CityGML for describing 3D city models, and COBie for handing over data to clients, and also provides an overview of BIM programming tools and interfaces. Part III is dedicated to the philosophy, organization, and technical implementation of BIM based collaboration and discusses the impact on legal issues including construction contracts. In turn, Part IV covers a wide range of BIM use cases in the different lifecycle phases of a built facility, including the use of BIM for design coordination, structural analysis, energy analysis, code compliance checking, quantity take off, prefabrication, progress monitoring, and operation. In Part V, a number of design and construction companies report on the current state of BIM adoption in connection with actual BIM projects and discuss the approach pursued for the shift toward BIM, including the hurdles taken. Lastly, Part VI summarizes the book's content and provides an outlook on future developments. The book was written both for professionals using or programming such tools and for
