Equity, Growth, and Community Chris Benner, Manuel Pastor, 2015-10-09 A free ebook version of this title is available through Luminos University of California Press's new open access publishing program for monographs Visit www.luminosoa.org to learn more In the last several years much has been written about growing economic challenges increasing income inequality and political polarization in the United States This book argues that lessons for addressing these national challenges are emerging from a new set of realities in America's metropolitan regions first that inequity is in fact bad for economic growth second that bringing together the concerns of equity and growth requires concerted local action and third that the fundamental building block for doing this is the creation of diverse and dynamic epistemic or knowledge communities which help to overcome political polarization and help regions address the challenges of economic restructuring and social divides

Superior Angela Saini, 2019-05-21 2019 Best Of Lists 10 Best Science Books of the Year Smithsonian Magazine Best Science Books of the Year NPR's Science Friday Best Science and Technology Books from 2019 Library Journal An astute and timely examination of the re emergence of scientific research into racial differences Superior tells the disturbing story of the persistent thread of belief in biological racial differences in the world of science After the horrors of the Nazi regime in World War II the mainstream scientific world turned its back on eugenics and the study of racial difference But a worldwide network of intellectual racists and segregationists quietly founded journals and funded research providing the kind of shoddy studies that were ultimately cited in Richard Herrnstein and Charles Murray's 1994 title *The Bell Curve* which purported to show differences in intelligence among races If the vast majority of scientists and scholars disavowed these ideas and considered race a social construct it was an idea that still managed to somehow survive in the way scientists thought about human variation and genetics Dissecting the statements and work of contemporary scientists studying human biodiversity most of whom claim to be just following the data Angela Saini shows us how again and again even mainstream scientists cling to the idea that race is biologically real As our understanding of complex traits like intelligence and the effects of environmental and cultural influences on human beings from the molecular level on up grows the hope of finding simple genetic differences between races to explain differing rates of disease to explain poverty or test scores or to justify cultural assumptions stubbornly persists At a time when racialized nationalisms are a resurgent threat throughout the world Superior is a rigorous much needed examination of the insidious and destructive nature of race science and a powerful reminder that biologically we are all far more alike than different
