# NOVEL FORMAT

## About This Template

By default, when compiled (File > Compile...), this project will generate a document in the standard manuscript format for novels. Settings are also provided to make it easy to compile to a paperback-style PDF for self-publishing or an ePUB or Kindle ebook.

## How To Use This Template

- Inside the "Manuscript" folder, create a new folder for each part of your novel as direct subdocuments of the Manuscript folder. Two folders have already been created at this level for you, with the placeholder title "Part". You should rename these with the titles of the parts of your novel.
  - Note: The "Manuscript" folder is what we refer to in the documentation as the "Draft folder". It's just been renamed "Manuscript" in this template.
- Create a new folder for each chapter inside the relevant "Part" folder and title each folder with the name of the chapter. If you don't intend to use chapter names, just use something descriptive that tells you what the chapter is about. (You do not need to—and indeed shouldn't—title the folders "Chapter One" and so on, because chapter numbering will be taken care of automatically during the Compile process.) The first chapter folders have been created for you with the placeholder title "Chapter".
- Create a new text document for each scene inside the chapter folders. (Upon export, scenes will be separated with the "#" character for standard manuscript format and with a blank line for other formats.)
