1. The first step in solving a system of linear equations is to write the equations in slope-intercept form. This allows you to compare the slopes of the lines. If the slopes are different, the lines are not parallel and the system has one solution. If the slopes are the same, the lines are either parallel or coincident. If the lines are parallel, the system has no solution. If the lines are coincident, the system has infinitely many solutions.

2. The second step in solving a system of linear equations is to use the elimination method to solve for one variable.
