Apparel Cutting Room Technology Manual:

Garment Manufacturing Technology Rajkishore Nayak, Rajiv Padhye, 2015-05-26 Garment Manufacturing Technology provides an insiders look at this multifaceted process systematically going from design and production to finishing and quality control. As technological improvements are transforming all aspects of garment manufacturing allowing manufacturers to meet the growing demand for greater productivity and flexibility the text discusses necessary information on product development production planning and material selection. Subsequent chapters covers garment design including computer aided design CAD advances in spreading cutting and sewing and new technologies including alternative joining techniques and seamless garment construction. Garment finishing quality control and care labelling are also presented and explored. Provides an insiders look at garment manufacturing from design and production to finishing and quality control. Discusses necessary information on product development production planning and material selection. Includes discussions of computer aided design CAD advances in spreading cutting and sewing and new technologies including alternative joining techniques and seamless garment construction. Explores garment finishing quality control and care labelling.

An Introduction to Quality Control for the Apparel Industry Pradip V. Mehta, 1985 *Cutting Room Management in Apparel Manufacturing* Dr. Prabir Jana, Mausmi Ambastha, 2020-01-01 Cutting Sewing Finishing is the common terminology used for the overall process that takes place in any organisation manufacturing garments via the industrial way. The cutting room or cutting department is the place where all the pre sewing activities like spreading cutting bundling ticketing fusing and embroidery are conducted before the cut components are sent to the sewing department. In a garment factory cutting department is pivotal from the point of view of controlling the material utilisation considering the fact that material constitutes 60% of the manufacturing cost. Although the labour cost component in spreading and cutting is very less in comparison to sewing the process involves material conversion which is irreversible and hence it is profoundly significant. Like any other department the technology used and the processes being followed are the two most important parameters of cutting room. This multi author book is an honest attempt on our part to cover all the cutting room processes in detail to unravel the relevance of material utilisation for garment manufacturing and thus provide an essential guide for cutting room managers and executives. These processes act as the tipping point for a garment factory where even a minor wastage or saving done in the fabric being used can have a major impact on the order margins. Besides they lay the foundation for the garments quality and hence become all the more important. Automation in Garment Manufacturing Rajkishore Nayak, Rajiv Padhye, 2017-11-10 Automation in Garment Manufacturing provides systematic and comprehensive insights into this multifaceted process. Chapters cover the role of automation in design and product development including color matching fabric inspection 3D body scanning computer aided design and prototyping. Part Two covers automation in garment production from handling spreading and cutting through to finishing and pressing techniques. Final chapters discuss

advanced tools for assessing productivity in manufacturing logistics and supply chain management This book is a key resource for all those engaged in textile and apparel development and production and is also ideal for academics engaged in research on textile science and technology Delivers theoretical and practical guidance on automated processes that benefit anyone developing or manufacturing textile products Offers a range of perspectives on manufacturing from an international team of authors Provides systematic and comprehensive coverage of the topic from fabric construction through product development to current and potential applications

Industrial Cutting of Textile Materials

Ineta Vilumsone-Nemes,2018-03-09

Industrial Cutting of Textile Materials Second Edition is a comprehensive guide to cutting room operations offering step by step information on processes technologies and best practice This new edition is updated to present the latest advances in automated cutting technology including advanced spreading methods and machines advanced knife cutting systems and pattern matching methods processing garment home and technical textiles Drawing on her extensive practical experience the author begins by reviewing initial steps such as unloading sorting and quality control of materials before discussing subsequent operations including lay planning and marker making manual and automated spreading and cutting fusing of cut components and final work operations such as sorting cut components for further joining The book also covers manual and advanced automated marker making spreading and cutting methods for more intricate fabrics such as striped fabrics and fabrics with check motif and border patterns narrow lace and fabrics with pile With essential information on cutting room operations and best practice this book provides engineers technologists and managers with the knowledge they need to maximize accuracy and efficiency to control production processes effectively and to improve product quality The book also enables academics and students engaged in the field of textile and clothing technology to gain a solid understanding of cutting room procedures Provides production managers technologists and other manufacturing specialists of textile goods the knowledge they need in order to increase raw material utilization and with it reduce production costs maximise cutting process efficiency control production processes effectively and improve ready product quality Describes spreading and cutting of garment home and technical textiles Includes guidance on best practice dealing with intricate fabrics Enables readers to benefit from the latest advances in automated textile cutting technologies
