

Chapter 8: An Introduction to Metabolism

- 8.1 Identify the first two laws of thermodynamics and explain how they relate to biological systems.
- 8.2 Explain what is meant by change in free energy and relate it to the following: spontaneous reactions, capacity to do work, stability, and exergonic and endergonic reactions.
- 8.3 Use examples to illustrate the coupling of ATP hydrolysis to endergonic reactions.
- 8.4 Explain how enzymes speed up metabolic reactions.
- 8.5 Describe how regulation of enzyme activity helps control metabolism.

This chapter on energy transfer and enzyme function is fundamental to your understanding of numerous topics discussed later in the course. Your careful study of this chapter will help you understand biological pathways and the regulation of cellular processes.

Study Tip: As you read this chapter, consider which processes described release energy and which ones require an input of energy.

Concept 8.1 An organism's metabolism transforms matter and energy.

LO 8.1: Identify the first two laws of thermodynamics and explain how they relate to biological systems.

The totality of an organism's chemical reactions is called *metabolism*. As a whole, metabolism manages the material and energy resources of the cell in intersecting pathways.

1. There are two types of reactions in metabolic pathways: *anabolic* and *catabolic*.

	a. Which reactions release energy?
	b. Which reactions consume energy?
	c. Which reactions build up larger molecules?
	d. Which reactions break down molecules?
	e. Which reactions are considered "uphill"?
	f. Which type of reaction is photosynthesis?
	g. Which type of reaction is cellular respiration?
	h. In living systems which reactions require enzymes to catalyze them?

Historical Geology Reed Wicander, James Stewart Monroe, 2000 HISTORICAL GEOLOGY: EVOLUTION OF EARTH AND LIFE THROUGH TIME, THIRD EDITION teaches students the basic principles of the physical and biological events of Earth's history as well as how scientists apply these principles to unravel the history of Earth. Authors Wicander and Monroe present a balanced overview of both the geological and biological history of the Earth as a continuum of interrelated events. These events reflect the underlying principles and processes that have shaped our planet. The authors also explain the historical development of these basic principles and processes and their importance in deciphering the history of Earth. Three major themes: time, evolutionary theory, and plate tectonics are woven throughout the book. These themes help readers link what may seem like unrelated material and are essential for understanding historical geology. The authors examine past and current practices of forest management and provide a comprehensive overview of known and suspected threats to diversity. In addition to discussing general ecological principles, the authors evaluate specific approaches to forest management that have been proposed to ameliorate diversity losses. They present one such policy: the Dominant Use Zoning Model, incorporating an integrated network of Diversity Maintenance Areas, and describe their attempts to persuade the U.S. Forest Service to adopt
