Aluminium Design Manual 2005:

Aluminium Alloys Jürgen Hirsch, Birgit Skrotzki, Günter Gottstein, 2008-11-17 Aluminium is a well established modern lightweight engineering and functional material with a unique combination of specific properties like strength, formability, durability, conductivity, corrosion resistance, etc. It is present in many intelligent solutions in established markets like building, transport, packaging, printing, and many others in our fast moving modern society. The various aluminium alloys can be processed quite efficiently in large quantities by conventional fabrication routes as well as in special, sophisticated forms and material combinations for highly innovative high tec solutions and applications. This book contains latest information about all these aspects in form of the refereed papers of the II th International Conference on Aluminium Alloys ICAA where world wide experts from academia and engineers from industry present latest results and new ideas in fundamental as well as applied research. Since 22 years the ICAA series provides scientists and engineers with a complete overview over the latest scientific and technological developments featuring profound technology based overviews and new innovative perspectives. This book is a reference for the scientific community as well as for the aluminium industry working on aluminium alloy development, processing and application issues. It gives a global perspective on the current focus of international research with emphasis on in depth understanding of specific properties and applications of conventional and advanced aluminium alloys.

Tubular Structures XIII Ben Young, 2010-11-12 *Tubular Structures XIII* contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 13th International Symposium on Tubular Structures (ISTS13) Hong Kong 15-17 December 2010. The International Symposium on Tubular Structures (ISTS) has a longstanding reputation for being the principal showcase for manufactured tubing and the prime international forum for discussion of research developments and applications in this field. The Symposium presentations herein include one invited ISTS Kurobane Lecture together with all the technical papers. Various key and emerging subjects in the field of hollow structural sections are covered such as special applications and case studies, static and fatigue behaviour of connections, joints, concrete filled and composite tubular members, and offshore structures, stainless steel and aluminium structures, earthquake and dynamic resistance specification and standard developments, material properties and structural reliability, impact resistance and brittle fracture, fire resistance, casting and fabrication innovations. Research and development issues presented in this book are applicable to buildings, bridges, offshore structures, entertainment rides, cranes, towers, and various mechanical and agricultural equipment. *Tubular Structures XIII* is thus a pertinent reference source for architects, civil and mechanical engineers, designers, steel fabricators, and contractors, manufacturers of hollow sections or related construction products, trade associations involved with tubing owners or developers of tubular structures, steel

Materials, Design and Manufacturing for Lightweight Vehicles

P.K. Mallick, 2010-03-01

Research into the manufacture of lightweight automobiles is driven by the need to reduce fuel consumption to preserve dwindling hydrocarbon resources without compromising other attributes such as safety, performance, recyclability and cost. Materials design and manufacturing for lightweight vehicles will make it easier for engineers to not only learn about the materials being considered for lightweight automobiles but also to compare their characteristics and properties. Part one discusses materials for lightweight automotive structures with chapters on advanced steels for lightweight automotive structures, aluminium alloys, magnesium alloys for lightweight powertrains and automotive structures, thermoplastics and thermoplastic matrix composites and thermoset matrix composites for lightweight automotive structures. Part two reviews manufacturing and design of lightweight automotive structures covering topics such as manufacturing processes for light alloys, joining for lightweight vehicles, recycling and lifecycle issues and crashworthiness design for lightweight vehicles. With its distinguished editor and renowned team of contributors Materials design and manufacturing for lightweight vehicles is a standard reference for practicing engineers involved in the design and material selection for motor vehicle bodies and components as well as material scientists, environmental scientists, policy makers, car companies and automotive component manufacturers. Provides a comprehensive analysis of the materials being used for the manufacture of lightweight vehicles whilst comparing characteristics and properties. Examines crashworthiness design issues for lightweight vehicles and further emphasises the development of lightweight vehicles without compromising safety considerations and performance. Explores the manufacturing process for light alloys including metal forming processes for automotive applications.
