**Human-Machine Collaboration and Emotional Intelligence in Industry 5.0** Kumar, Nitendra,Pal, Surya Kant,Agarwal, Priyanka,Rosak-Szyrocka, Joanna,Jain, Vishal,2024-07-22 In the rapidly evolving landscape of Industry 5.0 integrating emotional intelligence into the industrial framework is becoming increasingly crucial. Organizations are trying to navigate this uncharted territory and seeking guidance on understanding, implementing, and ethically managing artificial emotional intelligence (AEI). However, the absence of a comprehensive resource addressing these complexities has left a significant void in academic scholarship and industrial practice. *Human Machine Collaboration and Emotional Intelligence in Industry 5.0* offers a holistic exploration of emotion recognition, affective computing, and human-robot interaction. It equips readers with the knowledge and tools to successfully integrate AEI into Industry 5.0, ensuring a harmonious collaboration between humans and machines. This book is a go-to resource for scholars, industry professionals, and decision makers seeking to leverage emotional intelligence in the Fifth Industrial Revolution by addressing practical implementations, ethical considerations, and real-world impacts.

Semantic Technologies for Intelligent Industry 4.0 Applications Archana Patel, Narayan C. Debnath, 2023-10-06 As the world enters the era of big data, there is a serious need to give a semantic perspective to the data in order to find unseen patterns, derive meaningful information, and make intelligent decisions. Semantic technologies offer the richest machine-interpretable rather than just machine-processable and explicit semantics that are being extensively used in various domains and industries. These technologies reduce the problem of large semantic loss in the process of modelling knowledge and provide sharable, reusable knowledge and a common understanding of the knowledge. As a result, the interoperability and interconnectivity of the model make it priceless for addressing the issues of querying data. These technologies work with the concepts and relations that are very close to the working of the human brain. They provide a semantic representation of any data format, unstructured or semi-structured. As a consequence, data becomes a real-world entity rather than a string of characters. For these reasons, semantic technologies are highly valuable tools to simplify the existing problems of the industry, leading to new opportunities. However, there are some challenges that need to be addressed to make industrial applications and machines smarter. This book aims to provide a roadmap for semantic technologies and highlights the role of these technologies in industry. The book also explores the present and future prospects of these semantic technologies along with providing answers to various questions like: Are semantic technologies useful for the next era (Industry 4.0)? Why are semantic technologies so popular and extensively used in the industry? Can semantic technologies make intelligent industrial applications? Which type of problem requires the immediate attention of researchers? Why are semantic technologies very helpful in people's future lives? This book will potentially serve as an important guide towards the latest industrial applications of semantic technologies for the upcoming generation and thus becomes a unique resource for scholars, researchers, professionals, and practitioners in the field.

Handbook of AI-Based

Mechatronics Systems and Smart Solutions in Industrial Automation Pushpalatha Naveenkumar,Vandana Sharma, Gunapriya Devarajan,Azween Abdullah,Ahmed A. Elngar,2025-09-02 Artificial intelligence AI and mechatronics are booming areas where most of the industrial sectors are becoming smart nowadays This handbook includes material of multidisciplinary content from the AI mechanical and electronics engineering domains among others It gives insights into various application sectors discussing current global developments in mechatronics employing AI technology and addressing the complexity of current issues and the effects of diverse mechatronics systems Handbook of AI Based Mechatronics Systems and Smart Solutions in Industrial Automation focuses on system automation predictive analysis preventive analysis and real time decision making systems for next generation automation It discusses the advancements of mechatronics systems using AI applications along with the global approach toward smart industrial automation and presents the impact of AI on today s work of autonomous and industrial automation The book discusses future research potential and is beneficial to manufacturing healthcare and finance disputes while it offers AI algorithms to analyze large amounts of data and identifies patterns trends and anomalies for accurate predictions and optimization processes The handbook also addresses use cases and case studies related to AI in mechatronics along with applications Scholars in the field of AI in mechatronics and related applications will find this book useful In particular attention is drawn to both fundamental ideas and important practical contexts Readers interested in the most recent findings in the field of problem oriented processing approaches in mechatronics including those in academia data science industry research and graduate and undergraduate students will find this fascinating handbook extremely interesting
