Informing an Agent-based Model Through Amazon's Mechanical Turk, 2011

MTurk 'Unscrubbed' Jeanette Deetlefs, Mathew Chylinski, Andreas Ortmann, 2015 Widely accepted as a low cost fast turnaround solution with acceptable validity Amazon's Mechanical Turk MTurk is increasingly being used to source participants for academic studies Yet two commonly raised concerns remain the presence of quasi professional respondents or Super Turkers and the presence of Spammers those that compromise quality while optimising their pay rate We isolate the influence on research results of experienced subjects Super Turkers and of unreliable subjects Spammers jointly and separately Jointly including these subjects produces very similar results to jointly excluding them yet effect sizes decrease disproportionately to their sample representation Furthermore separately including experienced subjects in research results is shown to be as problematic as inclusion of unreliable subjects although the noise introduced by these subjects is divergent and measure dependent Hence removing only one of these types of respondents can be even more damaging to the reliability of results than including both

**Running Behavioral Operations Experiments Using Amazon's Mechanical Turk** Yun Lee, 2017 Mechanical Turk MTurk an online labor market run by Amazon provides a platform for conducting behavioral experiments the site offers immediate and inexpensive access to a large global subject pool In this paper we review recent research about MTurk and test the validity of using MTurk for experiments in behavioral operations management We used subjects from MTurk to replicate the experiments in Bolton and Katok 2008 Engelbrecht Wiggins and Katok 2008 Loch and Wu 2008 and Bolton Ockenfels and Thonemann 2012 Our results are similar to the originals but we also document some important differences MTurk appears to be an important and relevant tool for researchers in behavioral operations but we caution researchers to restrict use of this subject pool to

experiments involving short lived stimuli and behavioral manipulations      Analyzing the Amazon Mechanical Turk Marketplace Panagiotis G. Ipeirotis, 2014 Since the concept of crowd sourcing is relatively new many potential participants have questions about the AMT marketplace For example a common set of questions that pop up in an introduction to crowd sourcing and AMT session are the following What type of tasks can be completed in the marketplace How much does it cost How fast can I get results back How big is the AMT marketplace The answers for these questions remain largely anecdotal and based on personal observations and experiences To understand better what types of tasks are being completed today using crowd sourcing techniques we started collecting data about the AMT marketplace We present a preliminary analysis of the dataset and provide directions for interesting future research      **Running Experiments on Amazon Mechanical Turk** Gabriele Paolacci, Jesse Chandler, Panagiotis G. Ipeirotis, 2015 Although Mechanical Turk has recently become popular among social scientists as a source of experimental data doubts may linger about the quality of data provided by participants recruited from online labor markets We address these potential concerns by presenting new demographic data about the Mechanical Turk subject population reviewing the strengths of Mechanical Turk relative to other online and offline methods of recruiting participants and comparing the magnitude of effects obtained using Mechanical Turk and traditional subject pools We further discuss some additional benefits such as the possibility of longitudinal cross cultural and prescreening designs and offer some advice on how to best manage a common subject pool
