Algorithmic Graph Theory:

Algorithmic Graph Theory and Perfect Graphs Martin Charles Golumbic, 2014-05-10 Algorithmic Graph Theory and Perfect Graphs provides an introduction to graph theory through practical problems This book presents the mathematical and algorithmic properties of special classes of perfect graphs Organized into 12 chapters this book begins with an overview of the graph theoretic notions and the algorithmic design This text then examines the complexity analysis of computer algorithm and explains the differences between computability and computational complexity Other chapters consider the parameters and properties of a perfect graph and explore the class of perfect graphs known as comparability graph or transitively orientable graphs This book discusses as well the two characterizations of triangulated graphs one algorithmic and the other graph theoretic The final chapter deals with the method of performing Gaussian elimination on a sparse matrix wherein an arbitrary choice of pivots may result in the filling of some zero positions with nonzeros This book is a valuable resource for mathematicians and computer scientists

This thoroughly revised second edition with a foreword by Richard M Karp and notes by Andrew V Goldberg continues the exceptional presentation from the first edition and explains algorithms in a formal but simple language with a direct and intuitive presentation. The book begins by covering basic material including graphs and shortest paths, trees, depth first search and breadth first search. The main part of the book is devoted to network flows and applications of network flows and it ends with chapters on planar graphs and testing graph planarity Algorithmic Graph Theory Mathematisches Forschungsinstitut Oberwolfach, 2006 **Graph-Theoretic Concepts in Computer Science** Ludek Kucera, 2003-07-01 The 28th International Workshop on Graph Theoretic Concepts in Computer Science WG 2002 was held in Cesky Krumlov, a beautiful small town in the southern part of the Czech Republic on the river Vltava (Moldau) June 13-15, 2002. The workshop was organized by the Department of Applied Mathematics of the Faculty of Mathematics and Physics of Charles University in Prague. Since 1975 WG has taken place in Germany 20 times, twice in Austria and The Netherlands and once in Italy, Slovakia and Switzerland. As in previous years, the workshop aimed at uniting theory and practice by demonstrating how graph theoretic concepts can be applied to various areas in Computer Science or by extracting new problems from applications. The workshop was devoted to the theoretical and practical aspects of graph concepts in computer science and its contributed talks showed how recent research results from algorithmic graph theory can be used in computer science and which graph theoretic questions arise from new developments in computer science. Altogether 61 research papers were submitted and reviewed by the program committee. The program committee represented the wide scientific spectrum and in a careful reviewing process with four reports per submission it selected 36 papers for presentation at the workshop. Therefore, the referees' comments as well as the numerous fruitful discussions during the workshop have been taken into account by the authors of these conference proceedings.
