An Easy Guide To Factor Analysis:

An Easy Guide to Factor Analysis Paul Kline, 2014-02-25 Factor analysis is a statistical technique widely used in psychology and the social sciences. With the advent of powerful computers factor analysis and other multivariate methods are now available to many more people. *An Easy Guide to Factor Analysis* presents and explains factor analysis as clearly and simply as possible. The author Paul Kline carefully defines all statistical terms and demonstrates step by step how to work out a simple example of principal components analysis and rotation. He further explains other methods of factor analysis including confirmatory and path analysis and concludes with a discussion of the use of the technique with various examples. *An Easy Guide to Factor Analysis* is the clearest most comprehensible introduction to factor analysis for students. All those who need to use statistics in psychology and the social sciences will find it invaluable. Paul Kline is Professor of Psychometrics at the University of Exeter. He has been using and teaching factor analysis for thirty years. His previous books include *Intelligence the psychometric view* Routledge 1990 and *The Handbook of Psychological Testing* Routledge 1992

Advanced Quantitative Data Analysis Duncan Cramer, 2003 What do advanced statistical techniques do? When is it appropriate to use them? How are they carried out and reported? There are a variety of statistical techniques used to analyse quantitative data that masters students, advanced undergraduates and researchers in the social sciences are expected to be able to understand and undertake. This book explains these techniques when it is appropriate to use them, how to carry them out and how to write up the results. Most books which describe these techniques do so at too advanced or technical a level to be readily understood by many students who need to use them. In contrast, the following features characterise this book: concise and accessible introduction to calculating and interpreting advanced statistical techniques; use of a small data set of simple numbers specifically designed to illustrate the nature and manual calculation of the most important statistics in each technique; succinct illustration of writing up the results of these analyses; minimum of

mathematical statistical and technical notation and annotated bibliography and glossary of key concepts Commonly used software is introduced and instructions are presented for carrying out analyses and interpreting the output using the computer programs of SPSS Release 11 for Windows and a version of LISREL 8 51 which is freely available online Designed as a textbook for postgraduate and advanced undergraduate courses across the socio behavioural sciences this book will also serve as a personal reference for researchers in disciplines such as sociology and psychology ISBS '98 Hartmut J.

Riehle,Manfred M. Vieten,1998 *Psychological Testing* Robert M. Kaplan,Dennis P. Assessing Soldier Individual Differences to Enable Tailored Training ,2010 The operational tempo of the United States Army has increased dramatically placing a premium upon quality of training For decades researchers have explored the extent to which training quality can be improved by tailoring training defined as assessing learning relevant individual differences and assigning learners to optimal learning conditions based on those differences Before informed tailored training in U S Army institutional settings can take place researchers must know what individual differences IDs are related to course performance Instructors from the Warrant Officer Candidate School WOCS at Fort Rucker Alabama were interviewed to determine what IDs in their experience predict academic success in the WOCS course Based on those interviews three IDs dimensions initiative attention to detail and metacognition were chosen Other IDs were selected by the research team on the basis of hypothesized relationships between experience and course demands A set of instruments measuring those IDs as well as demographic information was

constructed and given to the instructors to review Upon instructor approval the packet was administered to a 5 week and a 7 week WOCS class total n 157 The student responses were then statistically compared with end of course grades to determine the predictive validity of the instruments For the 5 week class only one demographic variable and none of the instructor

provided IDs correlated with academic performance For the 7 week class two of the demographic items and two of the instructor provided IDs predicted academic performance However correlations between the predictor and criterion variables would have to be stronger to serve as a basis for tailoring training On the other hand the demographic items are easy to administer and the gain in prediction may be judged worth the effort Possible reasons for the moderate predictive power of the individual differences are proposed DTIC *Access & Equity* Asian Association of Open Universities.
