An Introduction To Duplicate Detection

An Introduction to Duplicate Detection Felix Nauman,Melanie Herschel,2022-06-01 With the ever increasing volume of data data quality problems abound Multiple yet different representations of the same real world objects in data duplicates are one of the most intriguing data quality problems The effects of such duplicates are detrimental for instance bank customers can obtain duplicate identities inventory levels are monitored incorrectly catalogs are mailed multiple times to the same household etc Automatically detecting duplicates is difficult First duplicate representations are usually not identical but slightly differ in their values Second in principle all pairs of records should be compared which is infeasible for large volumes of data This lecture examines closely the two main components to overcome these difficulties i Similarity measures are used to automatically identify duplicates when comparing two records Well chosen similarity measures improve the effectiveness of duplicate detection ii Algorithms are developed to perform on very large volumes of data in search for duplicates Well designed algorithms improve the efficiency of duplicate detection Finally we discuss methods to evaluate the success of duplicate detection Table of Contents Data Cleansing Introduction and Motivation Problem Definition Similarity Functions Duplicate Detection Algorithms Evaluating Detection Success Conclusion and Outlook Bibliography

HPI Future SOC Lab : proceedings 2011

Meinel, Christoph,Polze, Andreas,Oswald, Gerhard,Strotmann, Rolf,Seibold, Ulrich,D'Errico, Doc,2013 Together with industrial partners Hasso Plattner Institut HPI is currently establishing a HPI Future SOC Lab which will provide a complete infrastructure for research on on demand systems The lab utilizes the latest multi many core hardware and its practical implementation and testing as well as further

development The necessary components for such a highly ambitious project are provided by renowned companies Fujitsu and Hewlett Packard provide their latest 4 and 8 way servers with 1 2 TB RAM SAP will make available its latest Business byDesign ByD system in its most complete version EMC provides high performance storage systems and VMWare offers virtualization solutions The lab will operate on the basis of real data from large enterprises The HPI Future SOC Lab which will be open for use by interested researchers also from other universities will provide an opportunity to study real life complex systems and follow new ideas all the way to their practical implementation and testing This technical report presents results of research projects executed in 2011 Selected projects have presented their results on June 15th and October 26th 2011 at the Future SOC Lab Day events **Soft Computing in XML Data Management** Zongmin Ma,Li Yan,2010-07-07 This book covers in a great depth the fast growing topic of techniques tools and applications of soft computing in XML data management It is shown how XML data management like model query integration can be covered with a soft computing focus This book aims to provide a single account of current studies in soft computing approaches to XML data management The objective of the book is to provide the state of the art information to researchers practitioners and graduate students of the Web intelligence and at the same time serving the information technology professional faced with non traditional applications that make the application of conventional approaches difficult or impossible

[Transdisciplinary Engineering Methods for Social Innovation of Industry 4.0](#) M. Peruzzini,M. Pellicciari,C. Bil,2018-09-14 The concept of concurrent engineering CE was first developed in the 1980s Now often referred to as transdisciplinary engineering it is based on the idea that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process PCP The main goal of CE is to increase the efficiency and effectiveness of the PCP and reduce errors in later phases as well as incorporating considerations including environmental implications for the full lifecycle of the product It has become a substantive methodology in many industries and has also been adopted in the development of new services and service support This book presents the proceedings of the 25th ISPE Inc International Conference on Transdisciplinary Engineering held in Modena Italy in July 2018 This international conference attracts researchers industry experts students and government representatives interested in recent transdisciplinary engineering research advancements and applications The book contains 120 peer reviewed papers selected from 259 submissions from all continents of the world ranging from the theoretical and conceptual to papers addressing industrial best practice and is divided into 11 sections reflecting the themes addressed in the conference program and addressing topics as diverse as industry 4 0 and smart manufacturing human centered design modeling simulation and virtual design and knowledge and data management among others With an overview of the latest research results product creation processes and related methodologies this book will be of interest to researchers design practitioners and educators alike **Database Systems for Advanced Applications** Jianliang Xu,Ge Yu,Shuigeng Zhou,Rainer Unland,2011-04-06 This

Adaptive Windows for Duplicate Detection Uwe Draisbach, Felix Naumann, Sascha Szott, Oliver Wonneberg, 2012 Duplicate detection is the task of identifying all groups of records within a data set that represent the same real world entity respectively This task is difficult because i representations might differ slightly so some similarity measure must be defined to compare pairs of records and ii data sets might have a high volume making a pair wise comparison of all records infeasible To tackle the second problem many algorithms have been suggested that partition the data set and compare all record pairs only within each partition One well known such approach is the Sorted Neighborhood Method SNM which sorts the data according to some key and then advances a window over the data comparing only records that appear within the same window We propose several variations of SNM that have in common a varying window size and advancement The general intuition of such adaptive windows is that there might be regions of high similarity suggesting a larger window size and regions of lower similarity suggesting a smaller window size We propose and thoroughly evaluate several adaption strategies some of which are provably better than the original SNM in terms of efficiency same results with fewer comparisons
