nature most others can be made to display their typical forms and life cycles by special procedures only The identification of strains without previous knowledge of natural material needs to be carried out with special care The aim of this book is to make possible the identification and standardization of known morphologically and ecologically distinguishable cyanoprokaryotes that have been described from natural populations in Europe Therefore in the introductory part only data important for identification are presented At the end of this chapter we append a list of basic literature where all the detailed information necessary can be found We have selected accurate drawings of the species described in the text We also present illustrations of some non European species if necessary for understanding the generic diacritical features or infrageneric diversity    **Blyttia** ,2006    **Special Papers** ,1934    Algae ,2007    *Subject Guide to Books in Print* ,2001
