**Diophantine Equations and Systems** Demetrios P Kanoussis Ph D, 2024-03-08 Diophantine equations are polynomial equations with integer coefficients for which only integer solutions are sought In his great work Arithmetica the Greek mathematician Diophantus of Alexandria born in Alexandria Egypt in 200 AD and died in 284 AD known as the father of Algebra studied and solved such types of equations integer coefficients and integer solutions of the first up to the fourth degree These equations are now known as Diophantine equations A characteristic feature of Diophantine equations is that in these equations the number of equations is smaller than the number of unknowns For example we may have one equation with two unknowns or one equation with three unknowns or a system of two equations with three unknowns etc While in the set of real numbers  $\mathbb{R}$  these types of equations fewer equations than number of unknowns are indeterminate in the set of integers  $\mathbb{Z}$  3 2 1 0 1 2 3 or in the set of natural numbers  $\mathbb{N}$  1 2 3 4 these equations may or may not have integer solutions depending on the coefficients of the equations In this book we provide a systematic introduction to Diophantine equations with emphasis on the solution of various problems The first two chapters are devoted to first degree Diophantine equations and systems linear equations and systems while the third chapter is devoted to second degree Diophantine equations and systems Among other equations in this chapter we study the Pythagorean equation  $x^2 + y^2 = z^2$  and the Pell's equation  $x^2 - ky^2 = 1$  The solution of Pell's equation is achieved by a really brilliant method which is attributed to Lagrange Various examples of higher degree Diophantine equations are considered in chapter 4 The analytic description of the material covered in this book can be found in the table of contents The book is concluded with a collection of 40 miscellaneous challenging problems with answers and detailed remarks and hints In total the book contains 55 solved examples and 105 problems for solution
