Hennefeld,Charles Burchard,2002 This textAEs secret to success is the unique way that it fosters active participation by the reader and its teaching of problem solving skills in conjunction with a thorough introduction to the C language Hennefeld Baker and Burchard quickly get students actively involved in writing programs by using a four step problem solving methodology that is introduced in Chapter 1 This approach is used throughout the book in worked examples and programs that the students write The authors also emphasize functions as a powerful way of breaking down problems into small sub tasks In addition

programming concepts and syntax are introduced within the framework of examples so students can see immediately how the programming structure is used. The authors also provide a thorough introduction to the C language first covering procedural aspects to allow students to grasp basic syntax without getting bogged down in details of the object oriented paradigm. Later object oriented features are introduced with great care over three chapters: the first devoted to writing client programs for preexisting classes, the second on the syntax for implementing classes, and the third on designing classes for specific programming problems. Effective use of pedagogical devices that foster active reading round out the approach that has proven to be so successful in helping students learn a large subset of the C language.

All basic programming concepts are explained: coding mathematical expressions, decision making, loops, and recursion. The text makes no comparisons between C and C++ instead covering all aspects of C programming in detail from fundamental concepts to advanced topics. All C source code files are provided for the text's 300 programs on a companion diskette, allowing readers to begin programming immediately without having to retype the examples from the book. It also provides detailed discussions of objects and classes to train readers in the most common coding methodologies and reveal to them the power of C.
