

# Organization of a Research Paper:

## Introduction

A good **introduction** is relatively short. It tells why the reader should find the paper interesting, explains why the author carried out the research, and gives the background the reader needs to understand and judge the paper.

Specifically, the **Introduction** defines the nature and extent of the problems studied, relates the research to previous work (usually by a brief review of the literature clearly relevant to the problem), explains the objectives of investigation, and defines any specialized terms or abbreviations to be used in what follows. Remember that the **Introduction** leads logically to, and clearly states, the **hypothesis or principal theme of the paper**.

The **Introduction** should be relatively brief; most journals recommend less than **500** words. Avoid repetition: do not repeat the **Abstract** in the **Introduction** (and **Introduction** in the **Discussion**). Do not go into an extensive literature review; two to four most relevant and recent citations should be adequate to corroborate a statement. Do not repeat well-known facts nor state the obvious. For example, it is disappointing that even now, i.e., after more than 30 years of concerted efforts in scientific agroforestry and a large volume of literature in the subject, some manuscripts—and, interestingly, some editors—insist on providing a definition of agroforestry in any article on that subject! The **Introduction** section also may use different tenses: justification and motivation of the study is presented in present tense ("Soils store relatively large amounts of carbon in terrestrial ecosystems."), whereas the review of literature is presented in past tense ("Studies showed that ..."), or in present perfect tense if it is common knowledge ("Studies have shown that ..."). The objective is written in past tense ("The objective of the current study was ..."). Different journals follow different norms and styles. Some want discussion of literature in the **Introduction** while some want it in the **Discussion** section. Some journals require a brief account of the **Materials** and **Methods** to be included in the **Introduction** section, and some may want even the important conclusions presented in the **Introduction** section, although that tendency is now disappearing.

**Introduction to Scientific Research** Wendi Wolfram, 2018-12-15 Introduction to Scientific Research Strategy and Planning is designed as an introductory primer for

students interested in conducting research focused in both environmental and natural sciences. The book introduces concepts for the novice while providing instrumental recaps for a more seasoned researcher. Because the thought of developing and conducting an individual research project for the first time can seem a surmountable task having a primer to review the process and aid in breaking out the steps can be most valuable. The book is designed to explain the basic aspects of research using the scientific method and provides select examples along with concept applications and guidance on developing a written plan to conduct an individual research project. The text further explains how to modify a written plan to facilitate a variety of funding venues as well as briefly addressing ethical issues associated with research.

**Planning and Managing Scientific Research** Brian Kennett, 2014-03-09 Although there are many books on project management few address the issues associated with scientific research. This work is based on extensive scientific research and management experiences and is designed to provide an introduction to planning and managing scientific research for the beginning researcher. The aim is to build an understanding of the nature of scientific research and the way in which research projects can be developed, planned and managed to a successful outcome. The book is designed to help the transition from being a member of a research team to developing a project and making them work and to provide a framework for future work. The emphasis of the book is on broadly applicable principles that can be of value irrespective of discipline. It should be of value to researchers in the later stages of Ph D work and Postdoctoral workers and also for independent researchers.
