Advances in Protective Structures Research Hong Hao,Zhong-Xian Li,2012-08-17 The International Association of Protective Structures IAPS was launched on 1 October 2010 in Manchester UK during the first International Conference of Protective Structures The primary purpose of IAPS is to bring researchers and engineers working in the area of protective structures together and to promote research and development work for b **Hyper-Velocity Impacts on Rubble Pile**

Asteroids Jakob Deller,2016-12-01 The thesis presents a tool to create rubble pile asteroid simulants for use in numerical impact experiments and provides evidence that the asteroid disruption threshold and the resultant fragment size distribution are sensitive to the distribution of internal voids This thesis represents an important step towards a deeper understanding of fragmentation processes in the asteroid belt and provides a tool to infer the interior structure of rubble pile asteroids Most small asteroids are rubble piles re accumulated fragments of debris from earlier disruptive collisions The study of fragmentation processes for rubble pile asteroids plays an essential part in understanding their collisional evolution An important unanswered question is what is the distribution of void space inside rubble pile asteroids As a result from this thesis numerical impact experiments can now be used to link surface features to the internal structure and therefore help to answer this question Applying this model to asteroid teins which was imaged from close range by the Rosetta spacecraft a large hill like structure is shown to be most likely primordial while a catena of pits can be interpreted as evidence for the existence of fracturing of pre existing internal voids *Structures Under Extreme Loading Conditions* ,1998
