Dynamic Programming and Its Application to Variational Problems in Mathematical Economics Richard Bellman, 1956

The purpose of this paper is to discuss some variational problems arising from mathematical economics and some of the methods that can be used to treat these questions both analytically and computationally The discussion is limited to important and interesting classes of processes allocation and smoothing processes and to a discussion of the application of the theory of dynamic programming to those processes Author **Dynamic Programming and Mathematical Economics** Richard Bellman, 1963 Some Vistas of Modern Mathematics Richard Bellman, 2014-07-15 Rapid advances in the physical and biological sciences and in related technologies have brought about equally farreaching changes in mathematical research Focusing on control theory invariant imbedding dynamic programming and quasilinearization Mr Bellman explores with ease and clarity the mathematical research problems arising from scientific questions in engineering physics biology and medicine Special attention is paid in these essays to the use of the digital computer in obtaining the numerical solution of numerical problems its influence in the formulation of new and old scientific problems in new terms and to some of the effects of the computer revolution on educational and social systems The new opportunities for mathematical research presage Bellman concludes a renaissance of mathematics in human affairs by involving it closely in the problems of society
