

# MIG Welding (GMAW) Process

MIG welding is a gas shielded metal arc welding process using the heat of an electric arc between a continuously fed, consumable electrode wire and the material to be welded.

A wire of copper coated mild steel is fed continuously from a reel through a gun with a melting rate up to 5m/min.

Current through the wire ranges from 100 to 400 A depending upon the diameter of the wire.

CO<sub>2</sub> is principally used apart from argon or argon-helium mixture as shielding gas.

**Robotic Welding, Intelligence and Automation** Tzyh-Jong Tarn,Shan-Ben Chen,Changjiu Zhou,2007-08-13 Robotic welding systems have been used in different types of manufacturing They can provide several benefits in welding applications The most prominent advantages of robotic welding are precision and productivity Another benefit is that labor costs can be reduced Robotic welding also reduces risk by moving the human welder operator away from hazardous fumes and molten metal close to the welding arc The robotic welding system usually involves measuring and identifying the component to be welded we're ing it in position controlling the welding parameters and documenting the produced welds However traditional robotic welding systems rely heavily upon

human intervention. It does not seem that the traditional robotic welding techniques by themselves can cope well with uncertainties in the welding surroundings and conditions e.g. variation of weld pool dynamics, fluxion, solid weld, torch and etc. On the other hand, the advent of intelligent techniques provides us with a powerful tool for solving demanding real world problems with uncertain and unpredictable environments. Therefore, it is interesting to gather current trends and to provide a high quality forum for engineers and researchers working in the field of intelligent techniques for robotic welding systems. This volume brings together a broad range of invited and contributed papers that describe recent progress in this field.

This 600 plus page book has been called the MIG bible by some readers. It's the most comprehensive book ever written on managing the MIG process. The book covers all aspects of controlling both the MIG and flux cored process. A MANAGER OR ENGINEER DOES NOT REQUIRE THE ABILITY TO WELD; HOWEVER, THEY SHOULD HAVE THE FUNDAMENTAL PROCESS KNOWLEDGE OF WHAT MAKES A GOOD MIG OR FLUX CORED WELD. WHEN A MANAGER OR ENGINEER UNDERSTANDS HOW SALES INFLUENCE AND HYPE EFFECTS THE WELD SHOP, THEY ARE WELL ON THEIR WAY TO WELD PROCESS MANAGEMENT.

In the MIG Management book, you will find Extensive data on MIG gas selection without sales input. Over 100 pages on the problems with the pulsed process. How to establish effective weld process controls for robot cells. How to use special techniques to increase robot weld speeds. How to optimize manual and robot weld deposition rates. How to control sheet metal welds in automotive plants. How to best utilize MIG and flux cored for pipe welds. All this along with a unique simple method for controlling weld costs.
