Inducted 2003

Not many people think of Loyalist Connections going back to America, but one such prominent Loyalist descendant is the great inventor, Thomas Alva Edison. Edison was born in Milan, Erie County, Ohio, on February 11, 1847, son of Samuel and Nancy (Elliott) Edison. On the paternal side he descended from Dutch ancestors, who came from Amsterdam to the new world in 1737, and settled in New York where John Edison, the great-grandfather of Thomas was a banker. His maternal ancestry was Scotch.

Thomas attended school for a few months only, but was an apt scholar, showing preference for historical and scientific subjects. In 1854 his father removed to Port Huron, Michigan, where at the age of twelve the son engaged in various commercial enterprises, working himself as newsboy on a train running to Detroit. He occupied his leisure hours while in Detroit in reading and in studying qualitative analysis, making his experiments in a baggage car of the Grand Trunk railway, in which he also established a miniature printing-office, where he set up and printed *The Weekly Herald*. He later worked in the various larger cities of the United States and Canada, devoting himself to the study of electrical science. At this time he invented, while working in New Orleans, La., the automatic repeater, and in 1864 he conceived the idea which he afterward perfected of the system of telegraphy. While in Boston, he continued his experiments, but not till 1872, after he had been in New York City for one year, did he put his duplex telegraph in practical operation. He was made superintendent of the Gold & Stock telegraph company through an incident demonstrating his skill. He afterward invented the printing telegraph for stock quotations and sold his patent to the company for \$40,000. He worked in Newark, N.J., till 1876, making about fifty separate inventions and improvements in telegraphic communication. He then removed his works and laboratory to Menlo Park, devoting his whole time to scientific research, especially of his incandescent light, to electric motors for street cars and to the construction of the telephone, experiments with which led him to the invention of the phonograph. At Paris in 1881 his electrical display included lighting by incandescent lamps, the disc dynamo-electric machine, the microtensi-meter, the odo-roscope and the electro-monograph. He made a similar display at the Crystal Palace, London, and in various exhibitions in America. Having outgrown the laboratory at Menlo Park, he moved to Llewellyn Park, N.J., where he erected an extensive private laboratory, the largest in the world. In 1889 the Edison general electric company was formed with a capital stock of \$12,000,000, controlling the Edison patents.

His principal inventions include: The duplex and quadruplex telegraph, sending various messages in opposite directions over the same wire, which he sold to the Western Union telegraph company for \$340,000, and which the company reported had up to 1879 saved them over \$14,000,000; the quadruple autographic, harmonic, multiplex, automatic and phonoplex telegraphs; telegraphing from moving trains without the use of a special wire; the carbon rheostat; the pressure or carbon relay; the Edison dynamo; the pyro-magnetic motor; the pyro-magnetic generator; the ammeter; the odo-roscope; the Edison microphone; the incandescent lamp; the Edison meter; the weight volt-meter; the Edison electric pen; the Edison mimeograph; the Edison vote recorder; the magnetic ore-separator; the magnetic bridge; the dead-beat galvanometer; the phonometer; the Edison-Sims torpedo boat; the phonograph; telephone

*Who Was Thomas Alva Edison?* Margaret Frith, Who HQ, 2005-12-29 One day in 1882

Thomas Edison flipped a switch that lit up lower Manhattan with incandescent light and changed the way people live ever after. The electric light bulb was only one of thousands of Edison's inventions, which include the phonograph and the kinetoscope, an early precursor to the movie camera. As a boy observing a robin catch a worm and then take flight, he fed a playmate a mixture of worms and water to see if she could fly. *Edison: A Biography* Matthew Josephson, 2019-07-31 A great folk hero in American history, Edison is viewed by the public as a facile inventor, the electrical wizard, and the perfect symbol of the self-made and practical creator. But he was also a paradoxical figure, deaf, impoverished, and with no formal education. As a youngster, Edison nevertheless became a fertile and versatile inventor, accumulating fortunes for himself and others, but remained indifferent to wealth except as a means towards more inventions. Edison's key contributions include the carbon microphone, the electric light bulb, electricity distribution systems, the phonograph, and the motion picture camera. Edison's methods were also remarkable, halfway between the craftsman tinkerer of the early 19th century and the scientist of today. He established and ran pioneering research laboratories with large staffs, yet lacked training in mathematics or the basic sciences. Matthew Josephson's *Edison: A Biography* won the Society of American Historians Francis Parkman Prize in 1960. This is an outstanding biography. Josephson establishes the developing relationship between finance and invention, which constitutes the basis for Edison's success. He has mastered the substance of Edison's inventive activity and has written of it quite authoritatively and vividly. Thomas P. Hughes' *Technology and Culture* It is clear that there is reason to welcome yet another book about a man of whom
