**Evolving Fuzzy Systems - Methodologies, Advanced Concepts and Applications** Edwin Lughofer, 2011-01-19 In today s real world applications there is an increasing demand of integrating new information and knowledge on demand into model building processes to account for changing system dynamics new operating conditions varying human behaviors or environmental influences Evolving fuzzy systems EFS are a powerful tool to cope with this requirement as they are able to automatically adapt parameters expand their structure and extend their memory on the fly allowing on line real time modeling This book comprises several evolving fuzzy systems approaches which have emerged during the last decade and highlights the most important incremental learning methods used The second part is dedicated to advanced concepts for increasing performance robustness process safety and reliability for enhancing user friendliness and enlarging the field of applicability of EFS and for improving the interpretability and understandability of the evolved models The third part underlines the usefulness and necessity of evolving fuzzy systems in several online real world application scenarios provides an outline of potential future applications and raises open problems and new challenges for the next generation evolving systems including human inspired evolving machines The book includes basic principles concepts algorithms and theoretic results underlined by illustrations It is dedicated to researchers from the field of fuzzy systems machine learning data mining and system identification as well as engineers and technicians who apply data driven modeling techniques in real world

systems      **Nonlinear Predictive Control Using Wiener Models** Maciej Ławryńczuk, 2021-09-21 This book presents computationally efficient MPC solutions The classical model predictive control MPC approach to control dynamical systems described by the Wiener model uses an inverse static block to cancel the influence of process nonlinearity Unfortunately the model's structure is limited and it gives poor control quality in the case of an imperfect model and disturbances An alternative is to use the computationally demanding MPC scheme with on line nonlinear optimisation repeated at each sampling instant A linear approximation of the Wiener model or the predicted trajectory is found on line As a result quadratic optimisation tasks are obtained Furthermore parameterisation using Laguerre functions is possible to reduce the number of decision variables Simulation results for ten benchmark processes show that the discussed MPC algorithms lead to excellent control quality For a neutralisation reactor and a fuel cell essential advantages of neural Wiener models are demonstrated

**10th International Conference on Soft Computing Models in Industrial and Environmental Applications** Álvaro Herrero, Javier Sedano, Bruno Baruque, Héctor Quintián, Emilio Corchado, 2015-05-31 This volume of Advances in Intelligent and Soft Computing contains accepted papers presented at the 10th International Conference on Soft Computing Models in Industrial and Environmental Applications SOCO 2015 held in the beautiful and historic city of Burgos Spain in June 2015 Soft computing represents a collection or set of computational techniques in machine learning computer science and some engineering disciplines which investigate simulate and analyze very complex issues and phenomena This Conference is mainly focused on its industrial and environmental applications After a thorough peer review process the SOCO 2015 International Program Committee selected 41 papers written by authors from 15 different countries These papers are published in present conference proceedings achieving an acceptance rate of 40% The selection of papers was extremely rigorous in order to maintain the high quality of the conference and we would like to thank the members of the International Program Committees for their hard work during the review process This is a crucial issue for creation of a high standard conference and the SOCO conference would not exist without their help      *Advanced Neural Network-Based Computational Schemes for Robust Fault Diagnosis* Marcin Mrugalski, 2013-08-04 The present book is devoted to problems of adaptation of artificial neural networks to robust fault diagnosis schemes It presents neural networks based modelling and estimation techniques used for designing robust fault diagnosis schemes for non linear dynamic systems A part of the book focuses on fundamental issues such as architectures of dynamic neural networks methods for designing of neural networks and fault diagnosis schemes as well as the importance of robustness The book is of a tutorial value and can be perceived as a good starting point for the new comers to this field The book is also devoted to advanced schemes of description of neural model uncertainty In particular the methods of computation of neural networks uncertainty with robust parameter estimation are presented Moreover a novel approach for system identification with the state space GMDH neural network is delivered All the concepts described in this book are illustrated by both simple academic illustrative examples and practical applications
