## **Advances In Databases**

**Advanced Database Systems** Nabil R. Adam, Bharat K. Bhargava, 1993-12-08 Database management is attracting wide interest in both academic and industrial contexts. New application areas such as CAD/CAM, geographic information systems and multimedia are emerging. The needs of these application areas are far more complex than those of conventional business applications. The purpose of this book is to bring together a set of current research issues that addresses a broad spectrum of topics related to database systems and applications. The book is divided into four parts: object-oriented databases, temporal historical database systems, query processing in database systems, heterogeneity interoperability, open system architectures, and multimedia database systems.

**Advanced Database Indexing** Yannis Manolopoulos, Yannis Theodoridis, Vassilis Tsotras, 2012-09-07 Advanced Database Indexing begins by introducing basic material on storage media including magnetic disks, RAID systems and tertiary storage such as optical disk and tapes. Typical access methods e.g. B-trees, dynamic hash files and secondary key retrieval are also introduced. The remainder of the book discusses recent advances in indexing and access methods for particular database applications. More specifically, issues such as external sorting, file structures for intervals, temporal access methods, spatial and spatio-temporal indexing, image and multimedia indexing, perfect external hashing, methods, parallel access methods, concurrency issues in indexing, and parallel external sorting are presented for the first time in a single book. Advanced Database Indexing is an excellent reference for database professionals and may be used as a text for advanced courses on the topic.

*Advances in Database Systems* J. Paredaens, L. Tenenbaum, 2014-05-04 Advanced information technology is pervasive in any kind of human activity: science, business, finance, management, and others, and this is particularly true for database systems. Both database theory and database applications constitute a very important part of the state of the art of computer science. Meanwhile, there is some discrepancy between different aspects of database activity. Theoreticians are sometimes not much aware of the real needs of business and industry, software specialists not always have the time or the opportunity to get acquainted with the most recent theoretical ideas and trends as well as with advanced prototypes arising from these ideas; potential users often do not have the possibility of evaluating the theoretical foundations and the potential practical impact of different commercial products. So the main goal of the course was to put together people involved in different aspects of database activity and to promote active exchange of ideas among them.

**Advanced Database System** Chhanda Ray, 2020-09-30 The objective of this book is to address the advanced and emerging topics of modern database systems starting from the inception. This book is developed as a text book for the compulsory subject Database System.
