Advances In Flow Research:

Advances in Flow Research Corinna Peifer, Stefan Engeser, 2021-01-21 This second edition provides a review of the current flow research. The first thoroughly revised and extended part of the book addresses basic concepts, correlates, conditions and consequences of flow experience. This includes the developments of the flow model, methods to measure flow, its physiological correlates, personality factors involved in the emergence of flow, social flow, the relationship of flow with performance and wellbeing, but also possible negative consequences of flow. The second completely new part of the book addresses flow in diverse contexts, in particular work development, sports, music and arts, and human computer interaction. As such, the book provides a broad overview on the current state of flow research from the basics to specific contexts of application. It presents what has been learned since the beginning of flow research, what is still open and how the mission to understand and foster flow should continue. The book addresses researchers and students who are interested in flow as well as practitioners who seek for sound research on flow in their field of expertise.

Advances in Flow Research Stefan Engeser, 2012-03-20 The concept of Flow was first explained by Csikszentmihalyi 1975 described as an optimal experience. He noted that artists were entirely caught up in their projects, working feverishly to finish them and then lose all interest in their work after completion. The incentive lies in the act of creativity itself. The person feels optimally challenged while totally immersed in the activity. At the heart of flow research is the motivational aspect of this experience. Flow motivates people to carry out certain activities repeatedly, seeking a challenge in the act and looking to improve their skills and abilities. In this book, this motivational aspect will be imbedded in and related to other theories of intrinsic motivation and empirical work on flow and performance. The book provides a review of the current flow research with a focus on rigorous analysis on methodology. The author takes the time to present methodological aspects in flow research to qualify empirical work. In addition, this volume presents neuropsychological considerations and empirical correlates of flow experiences. The work also describes various theoretical integrations of the different paths being taken within the field of flow research. It presents what has been learned since the beginning of flow research, what is still open and how the mission to understand and foster flow experience research should continue.

Krishan, Devendra K. Agrawal, 2024-12-24 Flow cytometry is a state of the art technology that is widely used in biological research and clinical diagnostics. It is a high throughput platform that allows the quantification, differentiation and functional study of cells or cell-like particles in suspension. Various cell components can be targeted with fluorescently labelled antibodies or fluorescent dyes to allow measurement and analysis of the physical, chemical and biological properties of individual cells within homogenous or heterogeneous populations. Since its commercialization more than five decades ago, flow cytometry has advanced and become an very important analytical tool in translational research. With the advancement of instrument technology, an increasing number of fluorescent dyes and an expanding range of monoclonal antibodies, the applications of flow cytometry in applied research continue to grow. The use of multiparametric flow cytometry in translational research provides the ability to rapidly identify different cell populations and to simultaneously measure multiple parameters of single cells for efficiently assessing immune status, decrease/increase of specific immune cell populations, cell activation status, etc. of different cells in preclinical and clinical studies. The primary goal of any research work is to take research results from the bench to bed and back. The use of flow cytometry in applied research advances the development of new diagnostic tests or drugs for cancer treatment, immune monitoring, etc. that help in patient care. Today, every biological scientist needs to have basic knowledge of flow cytometry in order to utilise this technology properly in their own research and to understand other's research work. The present book has been designed to give the knowledge of flow cytometry and its applications to the researchers and teachers. It will allow the readers to utilize the technology in an appropriate way in their research work. This book has describing various applications of flow cytometry like cell health monitoring, immunophenotyping, cell sorting, stem cell characterization, micro vesicle analysis, etc.

Zhu, Yihan Xing, Yong Ma, Fengmei Jing, Jianhua Zhang, 2025-11-25 Offshore renewable energy is a hot issue in the interdisciplinary fields of ocean engineering and power engineering. In recent years, due to climate change and the development of ocean engineering, the subject of offshore renewable energy has received increasing attention. Its development and utilization will be conducive to the development of a low carbon economy and the realization of energy saving and emission reduction goals. It can achieve a complementary energy supply between land and sea, reducing the pressure on the traditional fossil energy supply in economically developed and energy intensive coastal areas. The development of offshore renewable energy is a long term process, but it is worth noting that with the development and gradual maturity of various technologies, offshore renewable energy will become the mainstream new energy in the future.

This Research Topic focuses on recent advances in the development and utilization of offshore renewable energy including research papers and review papers in the following directions but are not limited to 1 Efficient capture and utilization technology of renewable energy wind energy tidal energy wave energy 2 Offshore hydrogen production technology 3 Offshore photovoltaics 4 Offshore wind fishing integration technology 5 Comprehensive utilization technology of multi energy integrated system 6 Design technology for offshore mobile energy island 7 Fluid structure coupling problem in renewable energy equipment 8 Application of machine learning in renewable energy equipment 9 Ocean engineering hydrodynamics 10 Fluid structure interaction 11 New Energy Ships
