The theory section includes chapters that examine the partner proliferation problem in disaster response networks, a case study of humanitarian logistics that examines how humanitarian culture informs change adoption, and a look at the current state of the art for information visibility in humanitarian operations. Finally, the application section focuses on blood products, vaccines, and food assistance, with individual chapters on efficient inventorying and distribution of blood products during disasters, a detailed look at modeling in the context of the vaccine supply chain, a framework for achieving equity, effectiveness, and efficiency in food bank operations, and a spatio-temporal vulnerability assessment of the resilience of a population affected by sudden lack of food.

It examines the legal framework and the bureaucratic and political realities that govern intervention and helps to explain why performance has been so uneven.
