Advances In Decision Analysis Mathematical Modelling Theory And Applications:

   Advances in Decision Analysis Nadine Meskens,M.R. Roubens,2013-03-09 The present book fmds its roots in the International Conference on Methods and Applications of Multiple Criteria Decision Making held in Mons in May 1997 A small number of contributions to that conference were selected via a refereeing procedure and retained authors were requested to include in their final version their more recent results This explains why some papers differ significantly from the original presentation The introductory paper of Raynaud addresses the long range forecasts in Multiple Criteria Decision Making on the basis of a Delphi process that was run before and during the congress In a second part the French author explains how he and some of his partners could find the proof of an important conjecture the iteration of a strongly monotonic choice function is not a strongly monotonic ranking function The second part of the book covers methodological aspects of decision theory The contribution of Bouyssou and Pirlot concerns the reformulation of classical conjoint measurement models that induce a complete and transitive preference binary relation on the set of alternatives which seem to be unrealistic when decision makers are asked to compare objects evaluated on several attributes The authors propose to consider non transitive non complete and non additive decomposable conjoint models They define properties that characterize such models   *Recent Theories and Applications for Multi-Criteria Decision-Making* Aouadni, Sourour,Aouadni, Ismahene,2024-11-01 In an increasingly complex world decision makers face the challenge of optimizing multiple conflicting objectives across various scenarios Multi Criteria Decision Making MCDM techniques have emerged as essential tools for addressing these challenges and offer methods to evaluate alternatives and minimize subjectivity As the landscape of MCDM evolves with new approaches such as fuzzy set theory rough set theory and neutrosophic set theory decision making in situations involving varied and complex data becomes more reliable and consistent Recent Theories and Applications for Multi Criteria Decision Making explores the latest trends and innovations in this field The book includes thought provoking input from renowned researchers who cover case studies real world applications challenges and cutting edge methodologies It highlights the integration of advanced technologies such as AI big data and IoT with MCDM while offering practical insights into strategic decision making in today s digital age This volume serves as a valuable resource for scholars practitioners and researchers keen to improve their decision making capacity   **Multi-Criteria Decision Analysis in Management** Behl, Abhishek,2020-02-01 Multi criteria decision making MCDM has been extensively used in diverse disciplines with a variety of MCDM techniques used to solve complex problems A primary challenge faced by research scholars is to decode these techniques using detailed step by step analysis with case studies and data sets The scope of such work would help decision makers to understand the process of using MCDM techniques appropriately to solve complex issues without making mistakes Multi Criteria Decision Analysis in Management provides innovative insights into the rationale behind using MCDM techniques to solve decision making problems and provides comprehensive discussions on

these techniques from their inception development and growth to their advancements and applications The content within this publication examines hybrid multicriteria models value theory and data envelopment Ideal for researchers management professionals students operations scholars and academicians this scholarly work supports and enhances the decision making process   *Proceedings of 2nd International Conference on Mathematical Modeling and Computational Science* Sheng-Lung Peng,Cheng-Kuan Lin,Souvik Pal,2022-06-28 The conference proceeding of ICMMCS 2021 presents most recent scientific and technological advances in the fields of engineering mathematics and computational science to strengthen the links in the scientific community It is a collection of high quality peer reviewed research papers presented at the Second International Conference on Mathematical Modeling and Computational Science ICMMCS 2021 held online during October 29 30 2021 The topics covered in the book are mathematical logic and foundations numerical analysis neural networks fuzzy set theory coding theory higher algebra number theory graph theory and combinatory computation in complex networks calculus differential educations and integration application of soft computing knowledge engineering machine learning artificial intelligence big data and data analytics high performance computing network and device security Internet of Things IoT

Advanced Decision-Making Methods and Applications in System Safety and Reliability Problems He Li,Mohammad Yazdi,2022-07-09 This book reviews and presents several approaches to advanced decision making models for safety and risk assessment Each introduced model provides case studies indicating a high level of efficiency robustness and applicability which allow readers to utilize them in their understudy risk based assessment applications The book begins by introducing a novel dynamic DEMATEL for improving safety management systems It then progresses logically dedicating a chapter to each approach including advanced FMEA with probabilistic linguistic preference relations Bayesian Network approach and interval type 2 fuzzy set advanced TOPSIS with spherical fuzzy set and advanced BWM with neutrosophic fuzzy set and evidence theory This book will be of interest to professionals and researchers working in the field of system safety and reliability and postgraduate and undergraduate students studying applications of decision making tools and expert systems   *Mathematical Reviews* ,1999   **Cumulated Index to the Books** ,1999   **American Book Publishing Record** ,1997-09   **Advanced Decision Making for HVAC Engineers** Javad Khazaii,2016-08-10 This book focuses on some of the most energy consuming HVAC systems illuminating huge opportunities for energy savings in buildings that operate with these systems The main discussion is on cutting edge decision making approaches and algorithms in decision making under uncertainty genetic algorithms fuzzy logic artificial neural networks agent based modeling and game theory

These methods are applied to HVAC systems in order to help designers select the best options among the many available pathways for designing and the building of HVAC systems and applications The discussion further evolves to depict how the buildings of the future can incorporate these advanced decision making algorithms to become autonomous and truly smart
