AI Enabled IoT for Electrification and Connected Transportation Naveenkumar Marati, Akash Kumar Bhoi, Victor Hugo C. De Albuquerque, Akhtar Kalam, 2022-06-04 This book presents an overview of artificial intelligence AI in the automotive section especially in the modern era of green energy based electrification of vehicles and smart transportation systems. The book also discusses different Internet of Things aspects involved in the automotive domain with AI. The book presents autonomous driving systems, advanced driver assistance systems ADAS, autonomy AI involvement and machine learning techniques with challenges in electrification, prognostics and diagnostics. AI and IoT are two emerging technologies and their importance in other modern technology electrification on transportation connected vehicle segment are discussed thoroughly in this book with different topologies. It also presents AI applications in the charging profile prediction, state of charge, state of health, battery lifetime and battery temperature detection in dynamic conditions. Different algorithms are also given in the book to discuss the nearest point charging station for electric vehicle users. The book also discusses cybersecurity issues and challenges in the real time environment for AI implementation. IoT in transportation and autonomous driving. The other aspects of telematics, smart sensors for the implementation of the IoT and AI are also discussed especially in guidance and control aspects. ## **Introduction to Systems Thinking and Interdisciplinary Engineering**

Horst Czichos, 2022-10-17 This concise textbook introduces a systems approach to technology, describing tribological, mechatronic, cyber physical systems and the technologic concept of Industry 4.0 to students in a range of engineering domains. Technology in this book refers to the totality of human made benefit oriented products based on engineered combinations of material, energy and information. Dr Czichos examines technology in this volume in the context of systems thinking with regard to the following main technology areas: Technical systems with interacting surfaces in relative motion, especially in mechanical engineering, production and transport, including the analysis of friction induced energy losses and wear induced materials dissipation; Technical systems that require a combination of mechanics, electronics, controls and computer engineering for needs of industry and society; Technical systems with a combination of mechatronics and internet communication; Cyber physical Systems for the digitalization of Industry in the development project Industry 4.0. Considers technology as combination of the physical world and the digital virtual world of information and communication. Describes the product cycle of technical systems and the corner stones of technology, material, energy and information. Presents a holistic view of technology and engineering.
