Al-Thani,2010-06-04 Project finance has spread worldwide and includes numerous industrial projects from power stations and waste disposal plants to telecommunication facilities bridges tunnels railway networks and now also the building of hospitals education facilities government accommodation and tourist facilities Despite financial assessment of PF projects being fundamental to the lender

s decision there is little understanding of how the use of finance is perceived by individual stakeholders why and how a financial assessment is performed who should be involved where and when it should be performed what data should be used and how financial assessments should be presented. Current uncertainty in financial markets makes many sponsors of construction project financings carefully consider bank liquidity the higher cost of finance and general uncertainty for demand. This has resulted in the postponement of a number of projects in certain industry sectors. Governments have seen tax receipts drastically reduced which has affected their ability to finance infrastructure projects often irrespective of the perceived demand. Equity providers still seek to invest however there are less opportunities due to market dislocation. Due to the demand for global infrastructure it is believed that project financings will return to their pre-crunch levels or more so. However, lenders' liquidity costs will be passed on to the borrowers. Lenders will also be under stricter regulation both internally and externally. The steps outlined in the guide are designed to provide a basic understanding for all those involved or interested in both structuring and assessing project financings. Secondary contracts involving constructors, operators, finance providers, suppliers, and off-takers can be developed and assessed to determine their commercial viability over a project's life cycle. Special Features a structured guide to assessing the commercial viability of construction projects explains economic metrics to use in the decision-making process. A detailed case study shows how stakeholders apply the concept of project finance.

Inadomi,2010-01-01 For developing countries a stable and secure supply of electricity is crucial for development and for their populations well being Since the early 1990s the main mechanism for constructing power generation facilities in developing countries has been the independent power project IPP model where a foreign investor enters into long term investment contracts with the national utility This model has succeeded in attracting investment but raises complex regulatory and contractual challenges in addition to public concerns This book drawing on project contracts the author s interview sources case law and literature analyzes in detail the legal investment protection used by IPP investors to ensure sufficient returns and protect their contracted revenue stream The author examines how the model s corporate financial structure interlocks with strong contractual rights and with a number of measures used to improve the host country s creditworthiness in the short and long term including investment guarantees The second part of the book identifies that the IPP model normally leads to six main consequences for the host developing country The IPP model has led to private investment which has increases reliability modernization and introduced private standards It contains an intrinsic structural weakness in times of economic downturns It has shown a tendency to lead to overinvestment in generation capacity It has shown a tendency to lead to expensive and suboptimal solutions regarding choice of design and technology The model and its institutional surroundings contains insufficient disincentives against moral hazard and exploitative behavior including corruption and The IPP model does not facilitate a further development of the host country s power sector The author argues that these consequences for development can be improved without detrimentally compromising the private sector s willingness to continue to invest While pursuing this analysis the author also explores such issues as the following the web of parties and

contracts constituting the IPP model including the model's risk allocation an analysis of political risk including to what extent foreign investors also are protected against commercial and credit risks the competing needs of predictability and flexibility in long term contracts how investment arbitration tribunals have reacted both to the change in macroeconomic circumstances caused by the East Asian Crisis of 1997-98 and to numerable and credible allegations of corruption during procurement identification of factors reducing or increasing the IPP model's tendency to fail during severe economic recessions
