The screenshot shows the official website for Snap packages. The top navigation bar includes links for "snapcraft", "New", "Blog", "API", "Build", "Docs", and "Powered By". The main content area has a teal header with the text "The app store for Linux". Below this, a sub-header reads "Publish your app for Linux users — for desktop, cloud, and Internet of Things." A green button labeled "Package & Publish your app" is visible. To the right of the main content is a portrait of a man with glasses and a blue shirt, sitting in front of a computer monitor. The background of the slide features a large, stylized, semi-transparent "DF" logo.

Transcriptomics in Health and Disease Geraldo A. Passos,2015-01-27

After sequencing the human genome a decade ago researchers have continued their projects but now to try to better understand how and when genes are expressed in health and disease Efforts have been concentrated on the measurement of the expression of RNA transcripts In an analogy to the genome the term transcriptome was created to refer to the complete set of RNAs in a cell type or tissue in a particular situation Transcriptomics is the science that studies this issue and it is a branch of functional genomics Transcriptomics in Heath and Disease provides a comprehensive overview of the science of transcriptomics initially in health focusing on the concept of the transcriptome and the main methods to evaluate it The authors discuss the concept and use of gene expression signatures and transcriptional biomarkers in normal development and diseased tissues and organs As the transcriptome changes depending on the pathology there is also a focus on the variations in the gene expression in different diseases such as autoimmune inflammation cancer and infections This book should be very useful for researchers in molecular biology focusing on gene expression human genetics immunology and genomics Nuclear Science Abstracts ,1966 **Immune system modeling and analysis** Ramit Mehr,Miles

Davenport,2015-04-22 The rapid development of new methods for immunological data collection from multicolor flow cytometry through single cell imaging to deep sequencing presents us now for the first time with the ability to analyze and compare large amounts of immunological data in health aging and disease The exponential growth of these datasets however challenges the theoretical immunology community to develop methods for data organization and analysis Furthermore the need to test hypotheses regarding immune function and generate predictions regarding the outcomes of medical interventions necessitates the development of mathematical and computational models covering processes on multiple scales from the genetic and molecular to the cellular and system scales The last few decades have seen the development of methods for presentation and analysis of clonal repertoires those of T and B lymphocytes and phenotypic surface marker based repertoires of all lymphocyte types and for modeling the intricate network of molecular and cellular interactions within the immune systems This e Book which has first appeared as a Frontiers in Immunology research topic provides a comprehensive
