11.1c Use a towel when wiping oil to the engine

funnel may help to reduce spillage (see **Illustration**). Pour at first the quantity required of oil into the can and allow it to fill up to within 100 mm of the top. Continue adding in a small quantity at a time until the level is up to the lower mark on the dipstick. Adding around 1.5 litres will bring the level up to the upper mark on the dipstick. Add the 5-litre oil. Start the engine and run it at 1400 rpm for a few minutes, check for leaks around the oil filter seal and the timing chain ring. Note that there may be a few seconds after before the oil pressure warning light goes out after the engine is started, as the oil

circulates through the engine oil galleries and the rest of the engine. The correct level is indicated. Do not use a 4-litre can. **Leave the engine idling until the oil pressure light goes out. Increasing the engine speed with the warning light on will damage the turbocharger!**

12 Switch off the engine, and wait a few minutes for the oil to settle in the can. Wipe the can with the towel and the dipstick and the filter completely. Refill the can with the oil. Repeat the steps of oil replacement.

13 Dispose of the used engine oil safely, with reference to disposal procedures in the Reference section of the Manual.

11.2 Remove all hoses and debris from the area around the fuel filter drain valve. Loosen and check that the drain cap is in the top of the fuel filter chamber and undrained. Check the drain cap's function correctly by pouring a little water into the chamber to see that it drains off quickly. If a valve is thought to be faulty it should be replaced.

11.3 If it is not, lift the water reflector panel making sure it is closed securely in position.

11 Fuel filter drainage
