Methods and

Procedures for the Verification and Validation of Artificial Neural Networks Brian J. Taylor,2006-03-20 Neural networks are members of a class of software that have the potential to enable intelligent computational systems capable of simulating characteristics of biological thinking and learning Currently no standards exist to verify and validate neural network based systems NASA Independent Verification and Validation Facility has contracted the Institute for Scientific Research Inc to perform research on this topic and develop a comprehensive guide to performing V V on adaptive systems with emphasis on neural networks used in safety critical or mission critical applications Methods and Procedures for the Verification and Validation of Artificial Neural Networks is the culmination of the first steps in that research This volume introduces some of the more promising methods and techniques used for the verification and validation V V of neural networks and adaptive systems A comprehensive guide to performing V V on neural network systems aligned with the IEEE Standard for Software Verification and Validation will follow this book

Independent Component Analysis Stephen Roberts,Richard Everson,2001-03 Independent Component Analysis ICA has recently become an important tool for modelling and understanding empirical datasets It is a method of separating out independent sources from linearly mixed data and belongs to the class of general linear models ICA provides a better decomposition than other well known models such as principal component analysis This self contained book contains a structured series of edited papers by leading researchers in the field including an extensive introduction to ICA The major theoretical bases are reviewed from a modern perspective current developments are surveyed and many case studies of applications are described in detail The latter include biomedical examples signal and image denoising and mobile communications ICA is discussed in the framework of general linear models but also in comparison with other paradigms such as neural network and graphical modelling methods The book is ideal for researchers and graduate students in the field
