Artificial Intelligence And Human Institutions Human Centred Systems:

Artificial Intelligence and Human Institutions Richard Ennals, 2012-12-06 Artificial Intelligence and Human Institutions argues that successful applications of artificial intelligence are possible only within an understanding of human institutions and the limitations of technology Products of artificial intelligence research are becoming widely available to non specialists using low cost computer systems but there has been a lack of communication between researchers and community groups Taking the weak AI position the book explores the way insights and tools from artificial intelligence can be valuable in coming to terms with real world problems Drawing on the author's extensive practical experience in AI research and research management the book brings together case studies from the fields of education training business engineering defence health and community work and suggests future directions This book deals with advanced concepts of artificial intelligence for non specialist readers while providing an introduction to state of the art developments It seeks to use AI concepts to illuminate the practical and theoretical concerns of institutions and organisations opening up possibilities for new areas of collaborative work and revealing new sources of references and ideas This is the latest title in the Artificial Intelligence and Society series and will be of interest to lecturers and students in AI education social and political sciences and business studies

Skill and Education: Reflection and Experience Bo Göransson, Magnus Florin, 2012-12-06 This book has an important starting point in the conference held in Stockholm in May June 1988 on Culture Language and Artificial Intelligence It assembled more than 300 researchers and practitioners in the fields of technology philosophy history of ideas literature linguistics social science etc The conference was an initiative from the Swedish Center for Working Life based on the project AI Based Systems and the Future of Language Knowledge and Responsibility in Professions within the COST 13 programme of the European Commission Participants in the conference and researchers related to its aims were chosen to contribute to this book It is preceded by Knowledge Skill and

Designing Human-centred Technology Howard H. Rosenbrock, 2012-01-26 This second book in our series Artificial Intelligence and Society explores the issues involved in the design and application of human centred systems in the manufacturing area At first glance it may appear that a book on this topic is somewhat peripheral to the main concerns of the series In fact although starting from an engineering perspective the book addresses some of the pivotal issues confronting those who apply new technology in general and artificial intelligence AI systems in particular Above all the book invites us to consider whether the present applications of technology are such as to make the best use of human skill and ingenuity and at the same time provide for realistic and economically sustainable systems design solutions To do so it is necessary to provide systems which support the skill and are amenable to the cultures of the areas of application in question In a philosophical sense it means providing tools to support skills rather than machines which replace them to use Heidegger s distinction The book gives an authoritative account of the University of Manchester Institute of Science and Technology UMIST tradition of human centredness and provides a participatory design ap proach which focuses on collaborative learning and enhancement and creation of new skills It also argues that collaboration should be supported by institutions through the creation of supportive infrastructures and research environments It emphasises the optimisation of practical knowledge with the help of scientific knowledge and rejects the alternative

Critiques of Knowing Lynette Hunter, 2002-03-11 Critiques of Knowing explores what happens to science and computing when we think of them as texts Lynette Hunter elegantly weaves together vast areas of thought rhetoric politics AI computing feminism science studies aesthetics and epistemology Critiques of Knowing shows us that what we need is a radical shake up of approaches to the arts if the critiques of science and computing are to come to any fruition

The Practical Intellect Bo Göranzon, 2013-03-14 The intention of this book is not to add another technical work to the series of publications already available on matters connected with the relations between natural and artificial intelligence nor to repeat the positions already well expressed in for example the debate between John Searle Daniel Dennet and Hubert Dreyfus It is an attempt to encourage philosophical reflection on dimensions of the subject that have hitherto been somewhat neglected This book which explores a number of case studies is the fifth in the series the previous four books being i Knowledge Skill and Artificial Intelligence Bo Goranzon and Ingela Josefson Eds Springer Verlag London 1988 ii Artificial

Knowledge, Skill and Artificial Intelligence Bo Göranzon, Ingela Josefson, 2012-12-06 Issues raised by the Theory of Knowledge a central theme in the development of Artificial Intelligence are the main topic of this book The major questions are How is the expert s knowledge to be elicited what are the limits and possibilities How can skill be developed and maintained in a more and more computerized and abstract working life This last question is also closely related to the discussion on programs for education and training in society and working life Long term effects on skill formation in working life in relation to new technology are a very important area of research Case studies form the basis for philosophical reflections with the main concept of tacit knowledge as the central issue of skill and new technology To a great extent the discussion is based on current case studies of professional groups with experience in advanced computer technology The contributions of this book demonstrate the complicated nature of human knowledge They introduce different theoretical perspectives on the issue of knowledge acquisition and elicitation **Encyclopedia of Software Engineering**

Human Machine Symbiosis Karamjit S. Gill, 2012-12-06 There is now a serious discussion taking place about the moment at which human beings will be surpassed and replaced by the machine On the one hand we are designing machines which embed more and more human intelligence but at the same time we are in danger of becoming more and more like machines In these circumstances we all need to consider What can we do What should we do What are the alternatives of doing it This book is about the human centred alternative of designing systems and technologies This alternative is rooted in the European tradition of human centredness which emphasises the symbiosis of human capabilities and machine capacity The human centred tradition celebrates the diversity of human skill and ingenuity and provides an alternative to the mechanistic paradigm of one best way the sameness of science and the dream of the exact language This alternative vision has its origin in the founding European human centred movements of the 1970s These include the British movement of Socially Useful Technology the Scandinavian movement of Democratic Participation and the German movement of Humanisation of Work and Technology The present volume brings together various strands of human centred systems philosophy which span the conceptual richness and cultural diversity of the human centred movements The core ideas of human centredness include human machine symbiosis the tacit dimension of knowledge the system as a tool rather than a machine dialogue participation social shaping and usability
