

Base (1) must be installed in and secure against wall first.

Place a new O-ring (2) in groove in lower portion of wall cover.

To compensate against fluid leakage, joints should be sealed with new strips of an equivalent tape thickness.

Upper and lower O-ring and support should be secured with recommended grease before using lever.

To prevent leakage to the oil seal while installing upper and lower O-ring assemblies, steering lever should be set in a position that allows grease to flow out of the oil seal with upper O-ring greased and carefully lower O-ring seal assembly with the grease to ensure proper seal of O-ring.

Before using steering lever, check upper and lower O-ring. Note that these two are self-sealing type and should be checked. Tighten nuts to specified torque.

Oil the O-ring assembly when installing with steering lever. Grease should be applied to the O-ring. The O-ring should be installed and the lever should be set in the specified position.

Install upper and lower O-ring with recommended grease and install lever and secure with nut and O-ring.

After steering lever is installed, grease lever with grease.

CAUTION

When applying steering lever, lever must be held steady, causing torque to be applied to the lever. If the lever is not held steady, it will cause a critical amount of pressure will be applied to the lever, causing the lever to break.
