#### LEFT & RIGHT WHEEL LOCK CHECKING

This should only be necessary if:

- The steering lock does not turn the wheel even though the steering wheel is turned fully.

One wheel has contact between tire and a front axle component or body at full lock.

Turning circles left/right differ.

The distance between front axle components and tires (arrow) must be the same at full lock (full turn left/right). See Fig. 18. If the distances are unequal, this can be corrected by turning left/right the rod.
